WEATHERIZATION ASSISTANCE PROGRAM

CLOSE-UP

Preface

To celebrate the Weatherization Assistance Program's 25th Anniversary, the U.S. Department of Energy has developed the Weatherization Close-Up Compendium (Compendium). The Compendium is comprised of 52 individual Close-Ups, which overview the National Weatherization Program and feature each State and the District of Columbia.

The Compendium was created in collaboration with the State and local Weatherization agencies as a resource tool to provide information on the unique application of the Weatherization Program in each State and the District of Columbia. The Close-Ups are intended to illustrate the highlights of the program at the State level and provide a glimpse of the diverse activities and widespread program successes. They are representative, but not comprehensive, of the rich blend of activities and accomplishments that fully characterize the program.

The Compendium is organized in alphabetical order, starting with an overview of the National Weatherization Program. Each State-level Close-Up is color-coded by region for reference: Atlanta Region in yellow; Boston Region in navy blue; Chicago Region in green; Denver Region in red; Philadelphia Region in purple; and Seattle Region in light blue.
