**Notes:**

Data is for electric power sector consumption only. Data include fuel consumption to produce electricity by combined heat and power plants. Through 1988, consumption data are for electric utilities only. Beginning in 1989, consumption data also include independent power producers.

<sup>1</sup> Anthracite, bituminous coal, subbituminous coal, lignite, waste coal, and synthetic coal.

<sup>2</sup> Light fuel oil (nos. 1, 2, and 4). For 1949-1979, data are for gas turbine and internal combustion plant use of petroleum.

For 1980-2000, electric utility data also include small amounts of kerosene and jet fuel. Forecast values calculated from quadrillion Btu using conversion factor 5.825 MMBtu/barrel.

<sup>3</sup> Heavy fuel oil (nos. 5 and 6). For 1949-1979, data are for steam plant use of petroleum.

For 1980-2000, electric utility data also include a small amount of fuel oil no. 4. Forecast values calculated from quadrillion Btu using conversion factor 6.287 MMBtu/barrel.

<sup>4</sup> Jet fuel, kerosene, other petroleum liquids, and waste oil.

<sup>5</sup> Petroleum coke is converted from short tons to barrels by multiplying by 5. In forecasted values, total petroleum is calculated sum.

<sup>6</sup> Through 1998, data are for electric utilities only. Beginning in 1999, data are for electric utilities and independent power producers.

<sup>7</sup> Includes distillate fuel oil, residual fuel oil, other liquids and petroleum coke.
