

# Fuel Cell Electric Vehicle Evaluation

*Jennifer Kurtz (PI), Sam Sprik, Chris  
Ainscough, Genevieve Saur*  
National Renewable Energy Laboratory  
June 10, 2015  
DOE 2015 Annual Merit Review  
Washington, DC

Project ID TV001

This presentation does not contain any proprietary, confidential, or otherwise restricted information.

# Overview

## Timeline and Budget

- **Project start date: 10/2012\***
- **Total DOE funds received to date: \$1,265k**
- **FY14 DOE funding: \$415k**
- **FY15 planned DOE funding: \$365k**

## Barriers

- **Lack of current controlled and on-road hydrogen fuel cell vehicle data**

## Partners

- **Project partners supplying data include:**
  - **Daimler**
  - **GM**
  - **Honda**
  - **Hyundai**
  - **Nissan**
  - **Toyota**

\*Project continuation determined annually by DOE

# Project Objectives, Relevance, and Targets: Fuel Cell Electric Vehicle Evaluation

## FY15 Objectives

Analysis and reporting on FCEV durability, fuel economy, range, vehicle specifications, and driving.

APC/Shell Pipeline station, Torrance, CA. Photo: NREL

- **Objectives**
  - Validate hydrogen fuel cell electric vehicles (FCEV) in real-world setting
  - Identify current status and evolution of the technology
- **Relevance**
  - Objectively assess progress toward targets and market needs
  - Provide feedback to hydrogen research and development
  - Publish results for key stakeholder use and investment decisions

# Approach: NFCTEC Analysis and Reporting of Real-World Operation Data

Bundled data (operation and maintenance/safety) delivered to NREL quarterly

Internal analysis completed quarterly in NFCTEC

Results

Public

CDPs

DDPs

Confidential

## Detailed Data Products (DDPs)

- Individual data analyses
- Identify individual contribution to CDPs
- Shared every six months only with the partner who supplied the data

## Composite Data Products (CDPs)

- Aggregated data across multiple systems, sites, and teams
- Publish analysis results every six months without revealing proprietary data

[www.nrel.gov/hydrogen/proj\\_tech\\_validation.html](http://www.nrel.gov/hydrogen/proj_tech_validation.html)

# Approach: FCEVs

Six Data Providers<sup>1</sup>

Range of FCEV Model Years

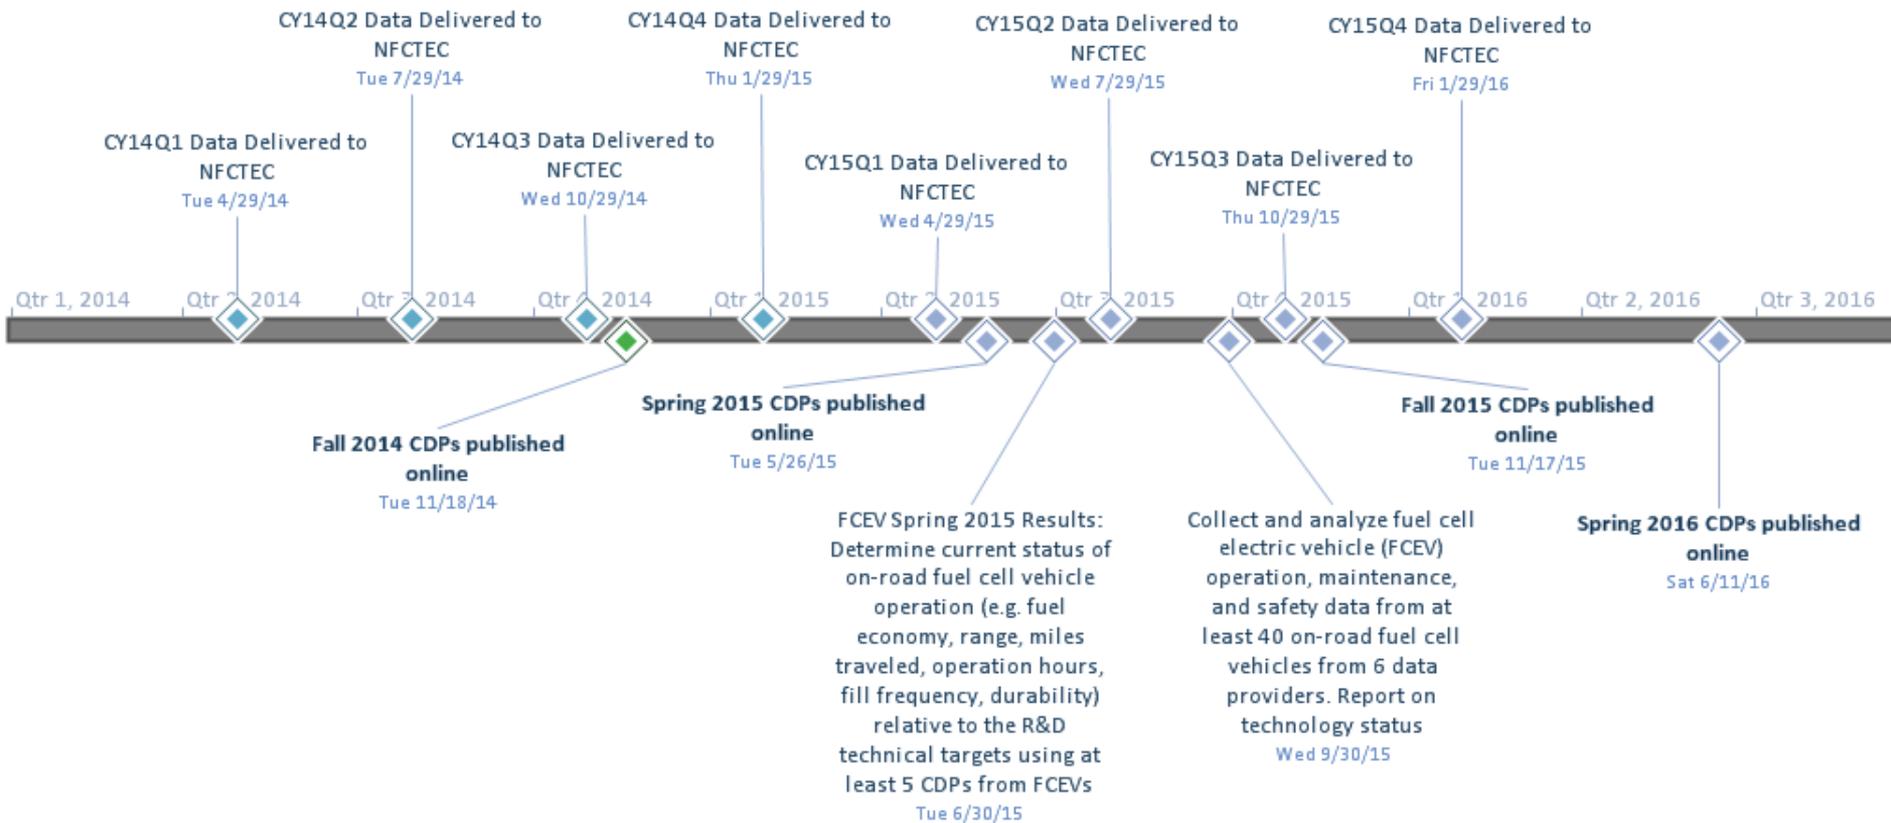

<sup>1</sup>DOE project overview:

- \$5.5 million DOE funding
- Data to be collected from up to ~90 vehicles

<sup>2</sup>Project managed by Electricore

# Approach: Milestones

## Regular project activities include:

Quarterly analysis

Bi-annual technical CDPs

Detailed data and analysis reviews with project partners

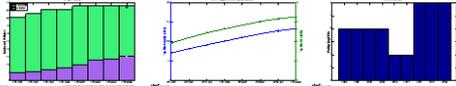

Publishing and presenting results

Collaborating with infrastructure evaluation

# Accomplishment: 32 FCEV CDPs—Count and Category

## Deployment

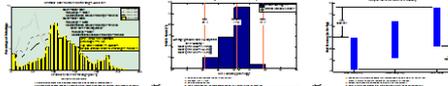

(# 01, 10, 33)

## Fuel Economy & Range

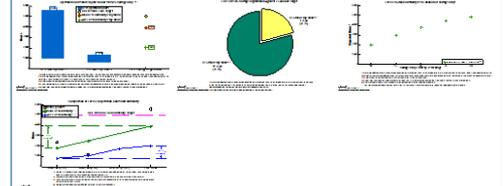

(# 7, 14, 32)

(# 7, 14, 32)

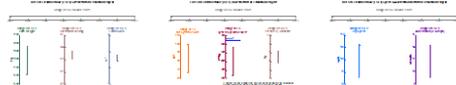

## Fuel Cell Durability

(# 21, 22, 23, 31)

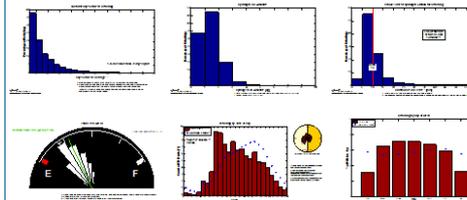

## Specifications

(#11, 12, 13)

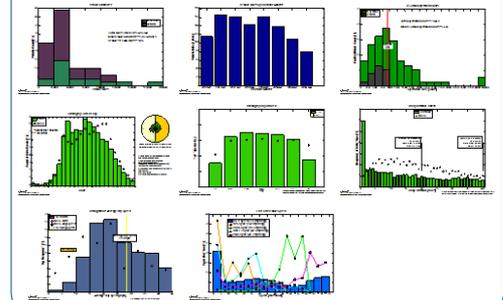

## Fueling

(# 6, 8, 9, 16, 16, 17)

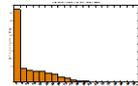

## Driving

(# 2, 3, 4, 18, 19,  
20, 26, 27)

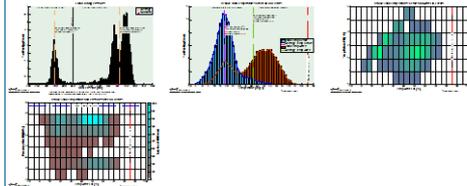

## Fuel Cell Operation

(# 24)

## H2 Performance

(# 25, 28, 29, 30)

Data included  
through 12/2014

Results are not all presented here but are available online  
at [www.nrel.gov/hydrogen/proj\\_tech\\_validation.html](http://www.nrel.gov/hydrogen/proj_tech_validation.html)

# Accomplishment: FCEV Deployment and Operation Summary through 2014CYQ4

**48**

FCEVs

**51**

Average on-road  
fuel economy miles/kg

**3,930**

Average fleet voltage durability  
(Hours to 10% degradation metric)

**20**

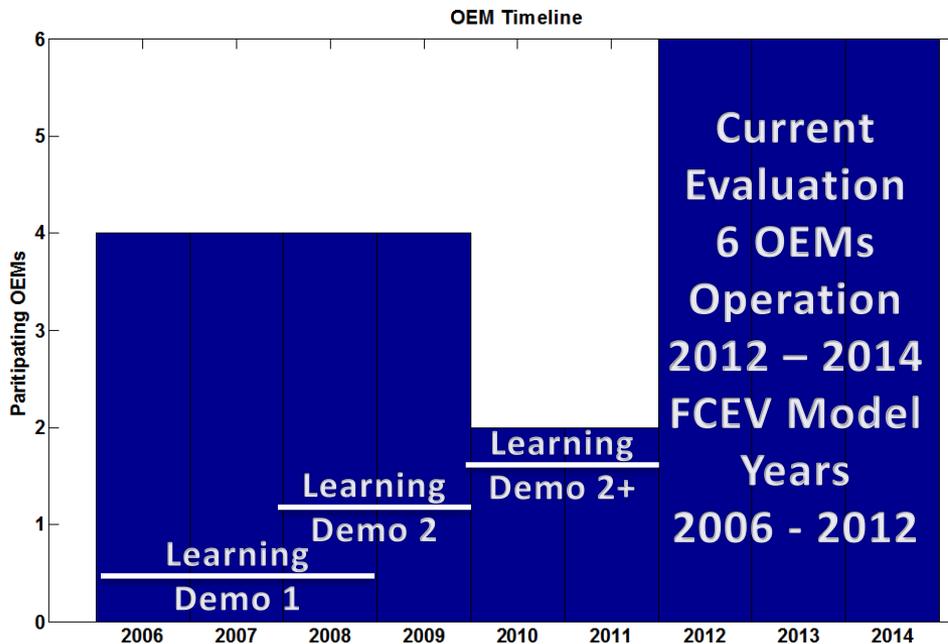

FCEVs retired

**> 2,400,000**

miles traveled

**> 178,000**

Max FCEV odometer miles

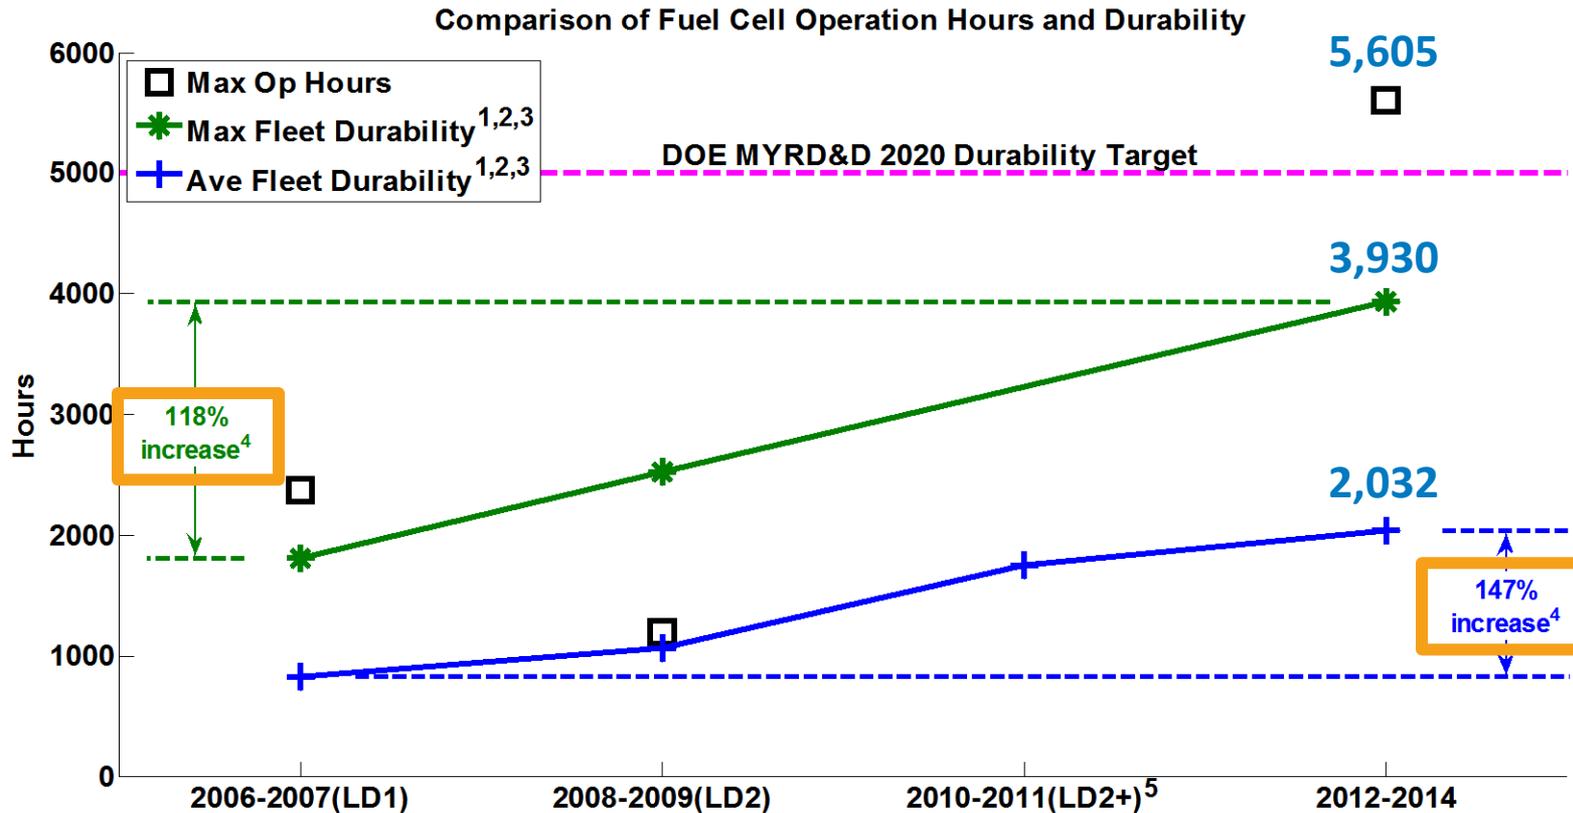

**> 79,000**

Fuel cell  
operation hours

**5,600**

Max fuel cell  
operation hours

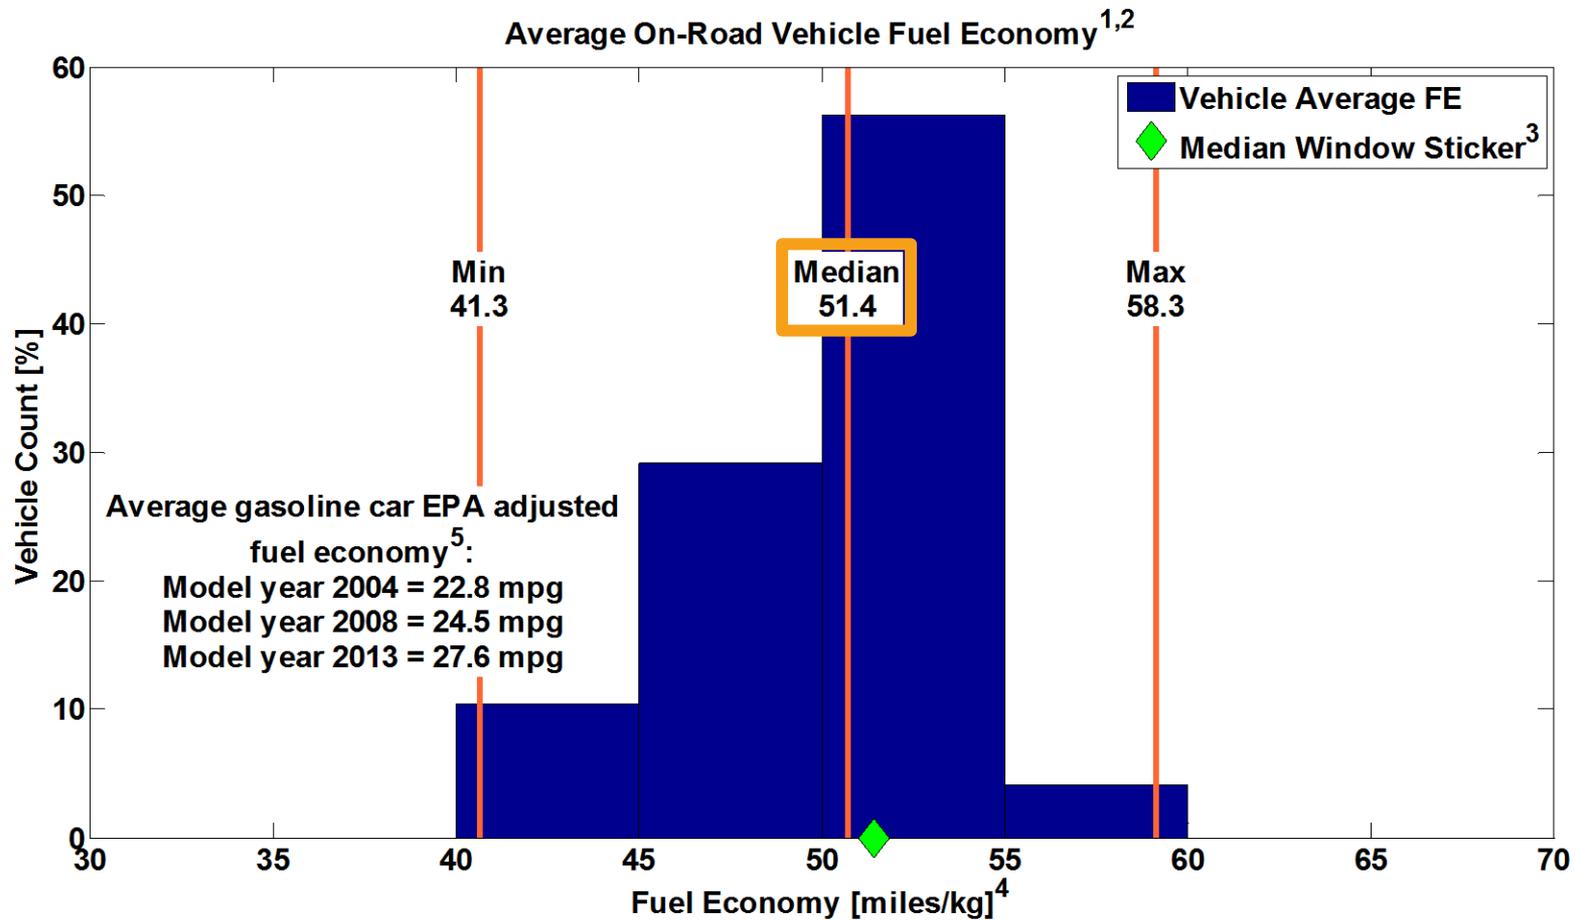

# Accomplishment: FCEV Durability Trend

- 1) Durability based on voltage degradation to 10% lower than beginning of life voltage. 10% voltage drop level is a DOE metric for assessing fuel cell durability.
- 2) Projections using on-road data are calculated at approximately 55 - 65% rated stack current.
- 3) 10% voltage drop is NOT an indication of an OEM's end-of-life criteria and projections do not address catastrophic stack failure.
- 4) Percent increases are calculated relative to LD1 (2006-2007).
- 5) Maximum operational hours not reported in LD2+ (2010-2011).

**FCEV voltage durability has continually improved over time.**

# Accomplishment: On-Road Fuel Economy

1) Calculated from on-road fuel cell stack current.

2) Excludes trips < 1 mile.

3) EPA Combined Rating.

4) 1 kg of hydrogen has the same energy content as 1 gallon (3.2 kg) of gasoline.

5) Source: EPA Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 - 2014.

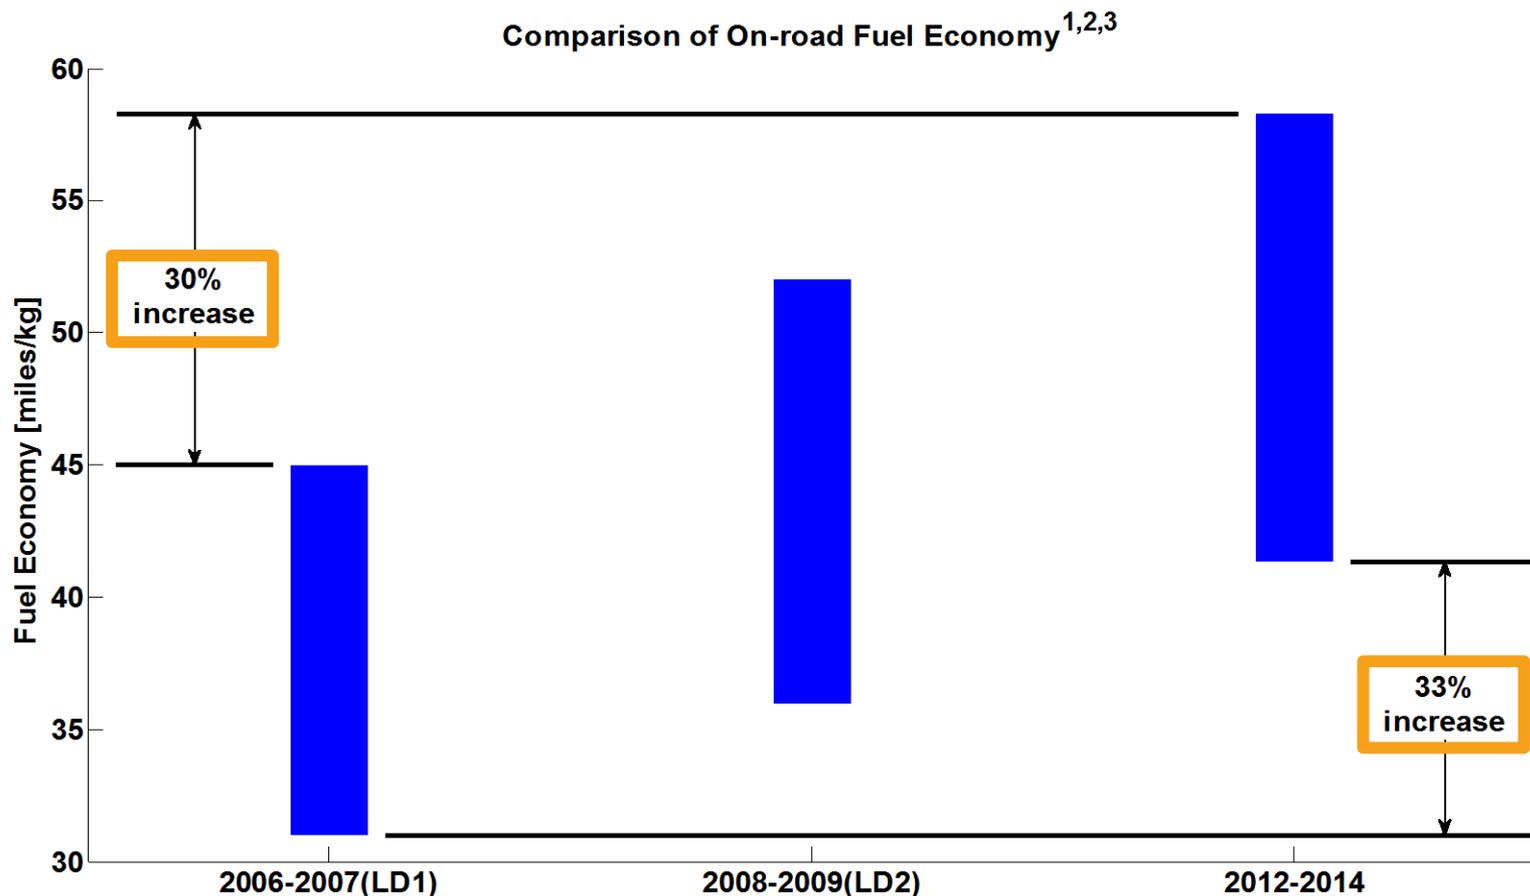

**The median on-road vehicle fuel economy is ~51 miles per kg, nearly twice the 2013 EPA adjusted fuel economy for gasoline.**

NREL cdp\_fcev\_14

Created: Apr-30-15 11:47 AM | Data Through: 2014Q4

# Accomplishment: On-Road Fuel Economy Trends

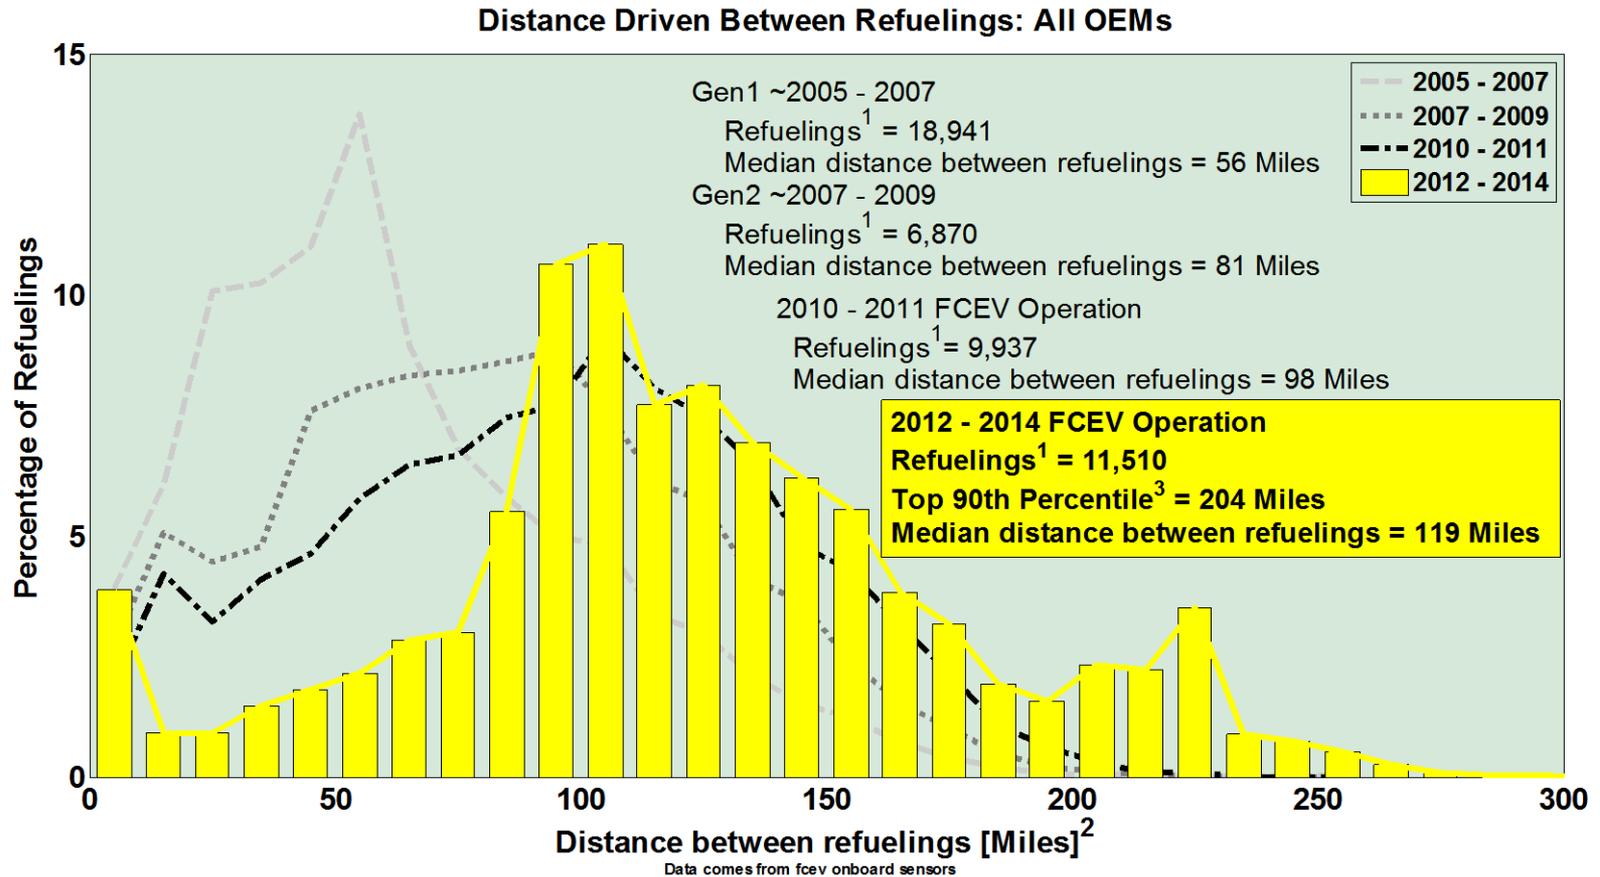

- 1) Range bars in the learning demo (LD) represented one data point for OEM's fleet mean. 2012-2014 analysis represents the spread of all vehicles.
- 2) Percent increases are calculated relative to LD1 (2006-2007).
- 3) Refer to NREL cdp\_fcev\_14 for more detailed information on current analysis.

 NREL cdp\_fcev\_32  
Created: Apr-30-15 11:47 AM | Data Through: 2014Q4

**The on-road fuel economy has consistently increased over the last 10 years.**

# Accomplishment: Driving Distance between Refuelings

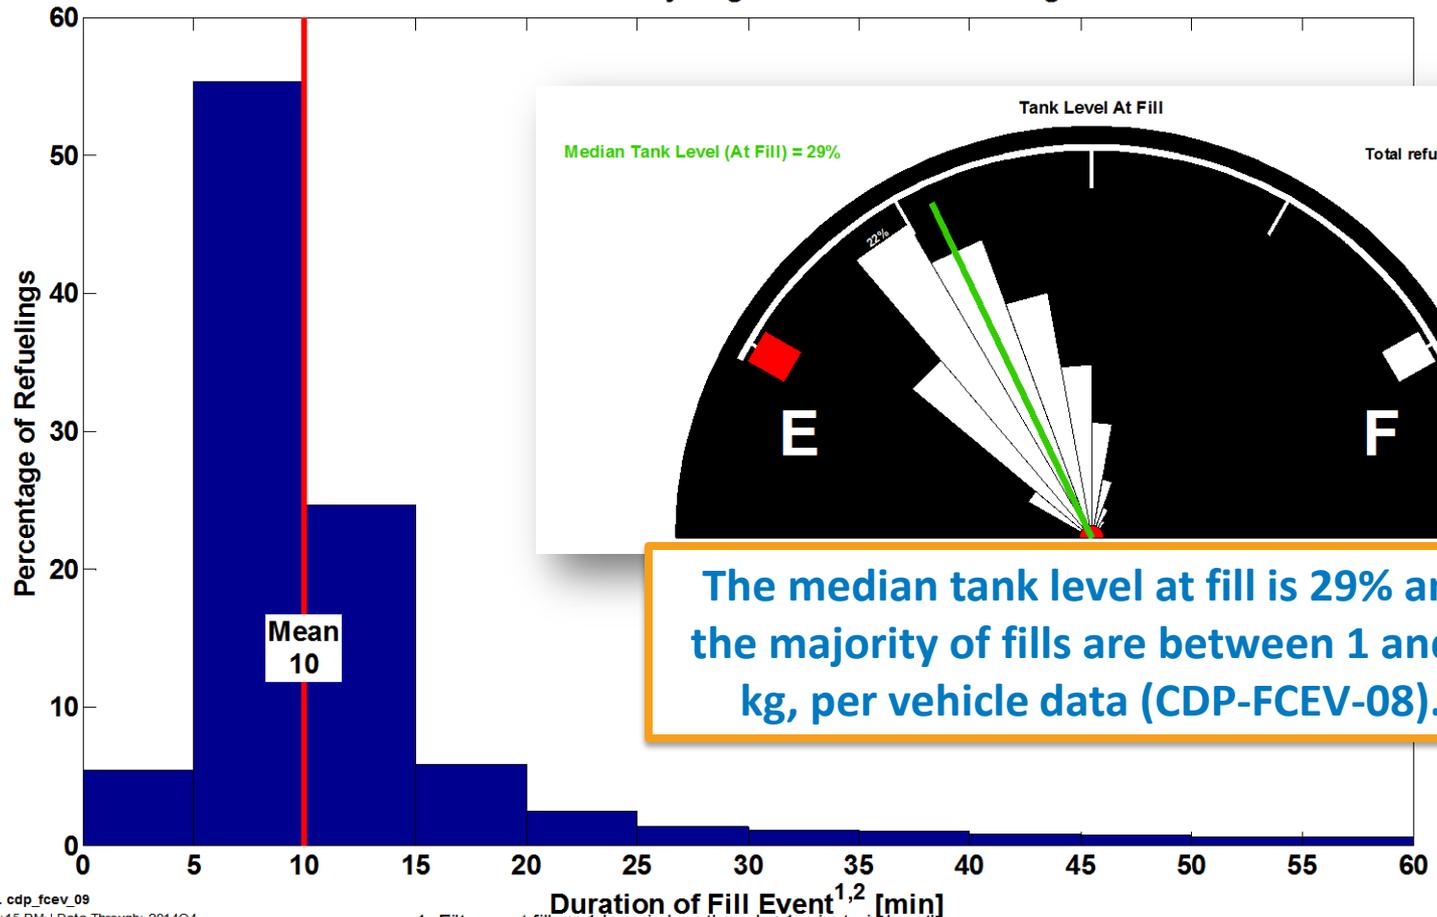

1. Some refueling events are not detected/reported due to data noise or incompleteness.
2. Distance driven between refuelings is indicative of driver behavior and does not represent the full range of the vehicle.
3. Events with over 400 miles between refueling are filtered out.

**The median distance between refuelings is 119 miles. Distance is based on actual driving and not the full vehicle range.**

# Accomplishment: Fueling

Vehicle Time at Hydrogen Station for Refueling

 NREL cdp\_fcev\_09  
Created: Apr-30-15 4:15 PM | Data Through: 2014Q4

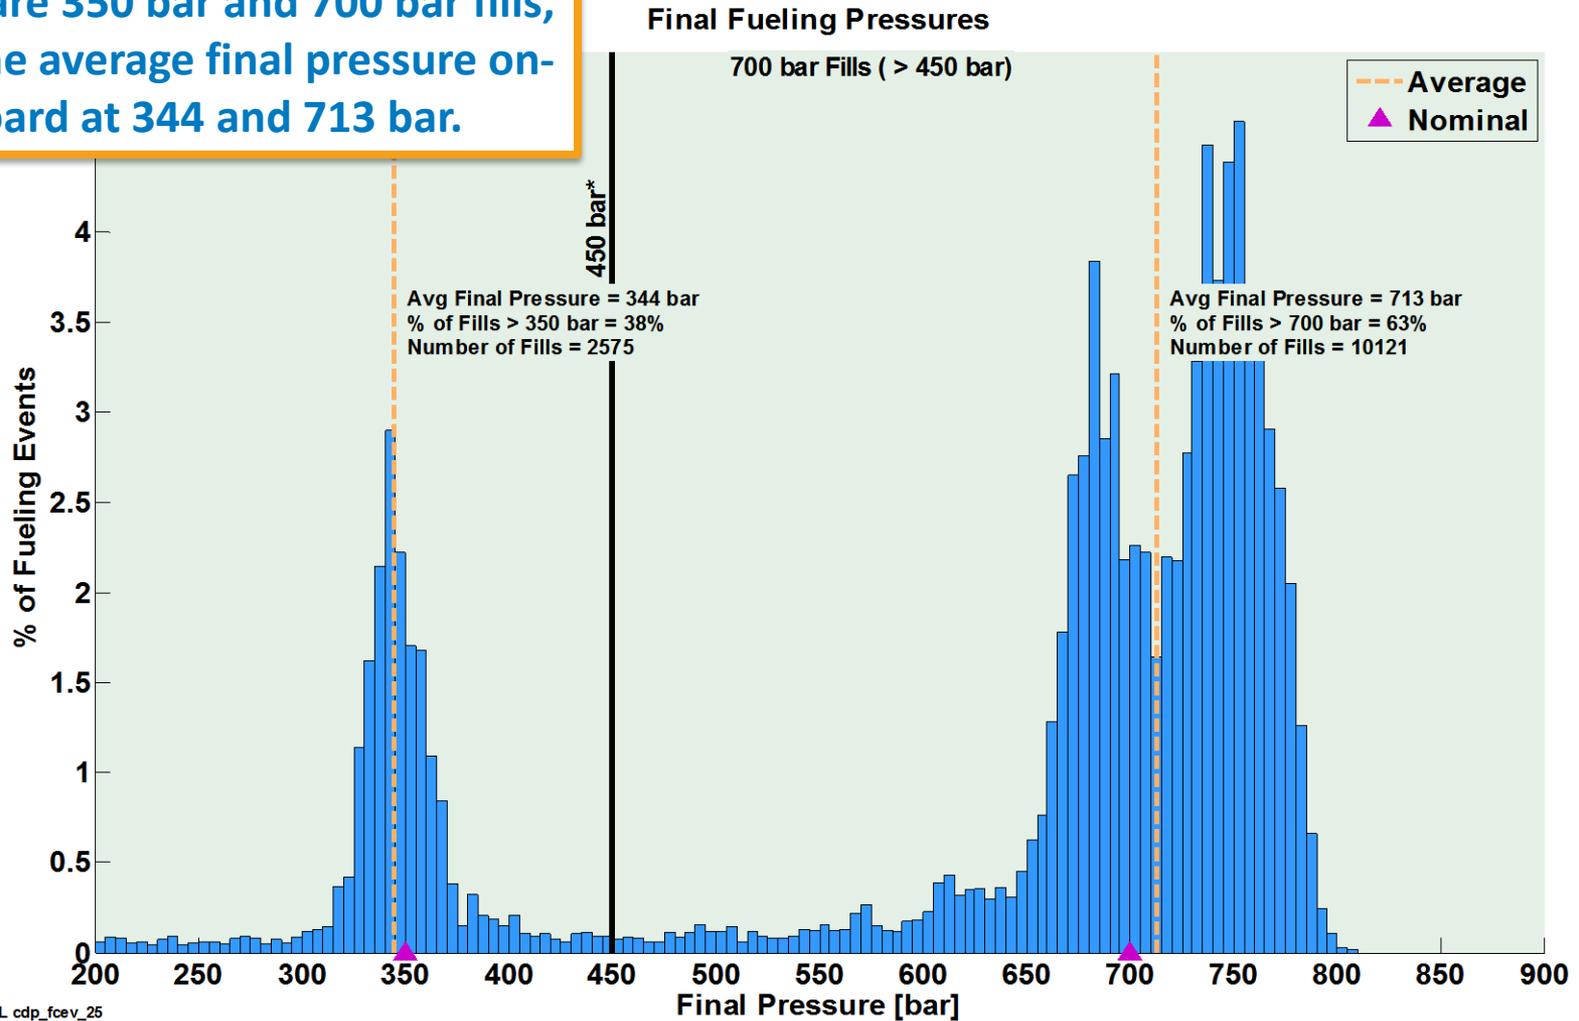

1. Filters out fills > 1 hour in length and < 1 minute in length
2. Data comes from FCEV onboard sensors and is based on the end and start time of the trip data files around a fill

The median tank level at fill is 29% and the majority of fills are between 1 and 2 kg, per vehicle data (CDP-FCEV-08).

The average time spent at station is 10 minutes. The average fill time (gas flowing) from the station data is 5.6 minutes. The remaining time at the station is for connection, point-of-sale, and other (CDP-FCEV-09).

# Accomplishment: On-Board Hydrogen Tank Pressures

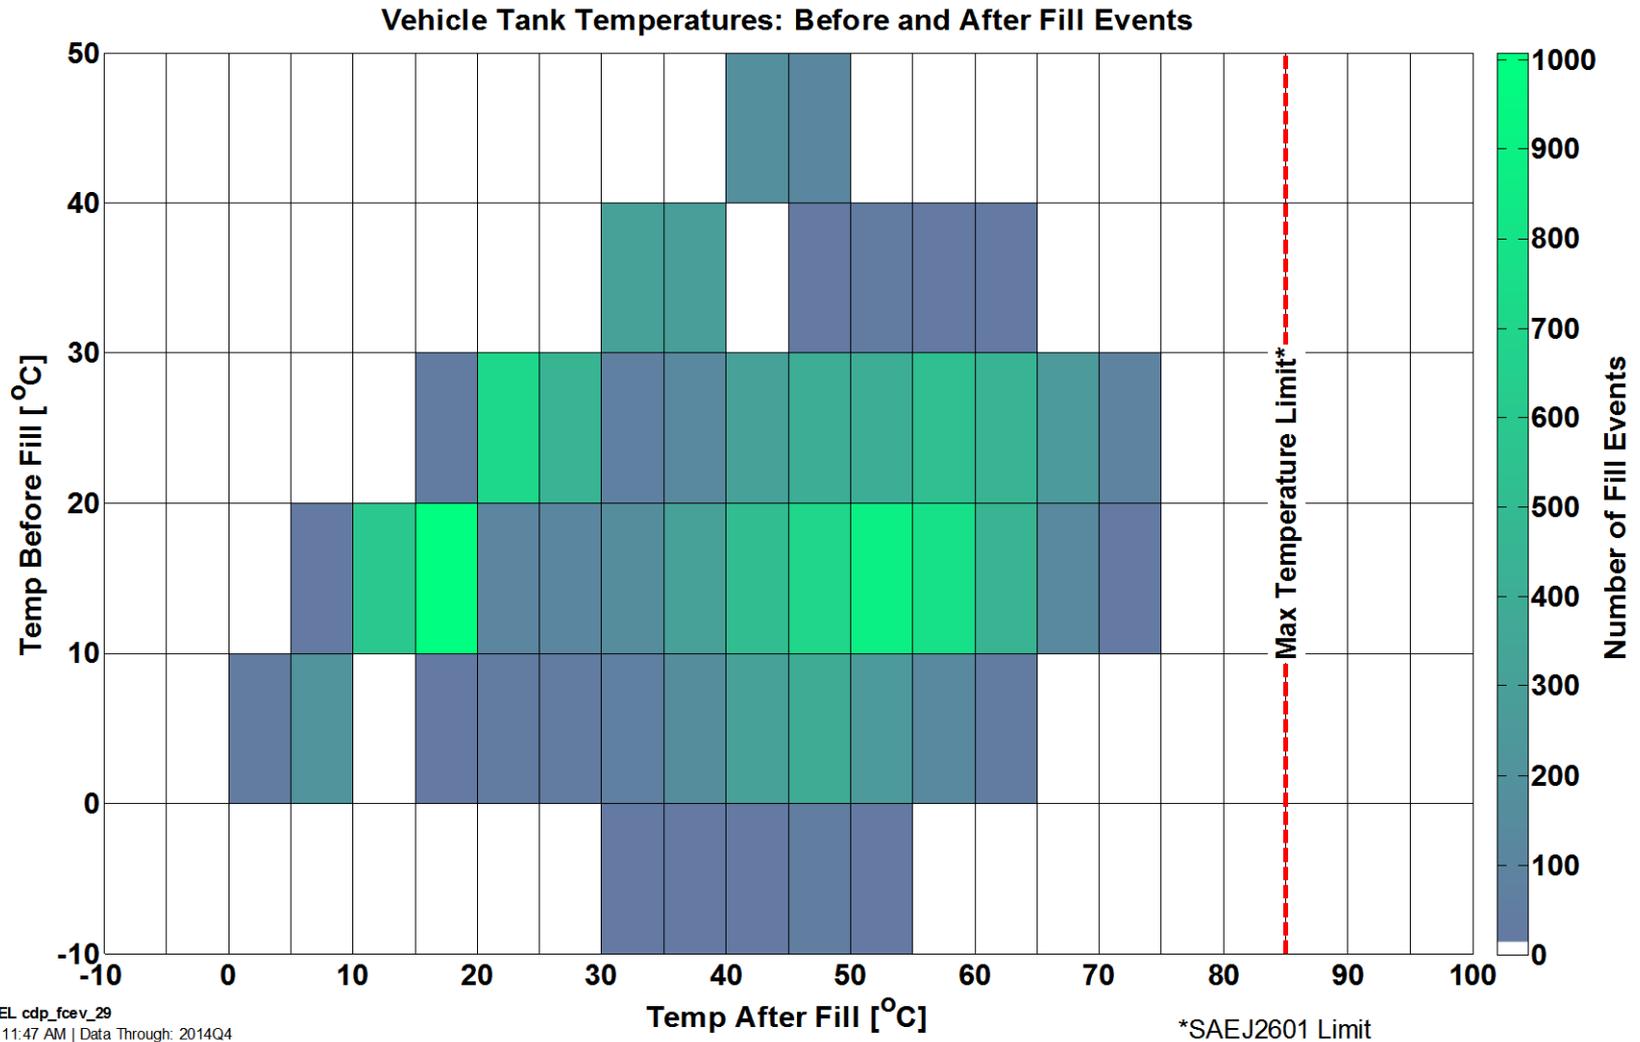

There are 350 bar and 700 bar fills, with the average final pressure on-board at 344 and 713 bar.

 NREL cdp\_fcev\_25  
Created: Apr-30-15 11:48 AM | Data Through: 2014Q4

\*The line at 450 bar separates 350 bar fills from 700 bar fills. It is slightly over the allowable 125% of nominal pressure (437.5 bar) from SAE J2601.

# Accomplishment: On-Board Hydrogen Tank Temperatures

NREL cdp\_fce\_v\_29  
Created: Apr-30-15 11:47 AM | Data Through: 2014Q4

The tank temperature is typically 10° to 30°C (approximately ambient) before a fill and 45° to 65°C after a fill. The tank temperature after a fill has not exceeded 85°C.

# Accomplishments: Status Against Technical Targets

Vehicle Performance Metrics	DOE Target (Year 2020) <sup>b</sup>	Current <sup>a</sup>	LD2+ <sup>c</sup>	LD2 <sup>c</sup>	LD1 <sup>c</sup>
<b>Durability</b>					
Max Fuel Cell Durability Projection (hours)	5,000	3,930	--	2,521	1,807
Average Fuel Cell Durability Projection (hours)		2,032	1,748	1,062	821
Max Fuel Cell Operation (hours)		5,605	1,582	1,261	2,375
<b>Efficiency</b>					
Adjusted Dyno (Window Sticker) Range		No Update Planned	--	196-254 miles	103-190 miles
Median On-Road Distance Between Fuelings		119 miles	98 miles	81 miles	56 miles
Fuel Economy (Window Sticker)		51 mi/kg (median)	--	43 – 58 mi/kg	42 – 57 mi/kg
Fuel Cell Efficiency at ¼ Power	60%	No Update Planned	--	53% – 59%	51% – 58%
Fuel Cell Efficiency at Full Power		No Update Planned	--	42% – 53%	30% – 54%
<b>Specification</b>					
Specific Power (W/kg)	650	Planned 2015		306-406	183-323
Power Density (W/L)	850	Planned 2015		300-400	300-400

a) Current results are available at [http://www.nrel.gov/hydrogen/proj\\_fc\\_vehicle\\_evaluation.html](http://www.nrel.gov/hydrogen/proj_fc_vehicle_evaluation.html) (Updated 10/2014)

b) Fuel Cell Technologies Office Multi-Year Research, Development, and Demonstration Plan (<http://energy.gov/eere/fuelcells/downloads/fuel-cell-technologies-office-multi-year-research-development-and-22>)

c) National Fuel Cell Vehicle Learning Demonstration Final Report (<http://www.nrel.gov/hydrogen/pdfs/54860.pdf>)

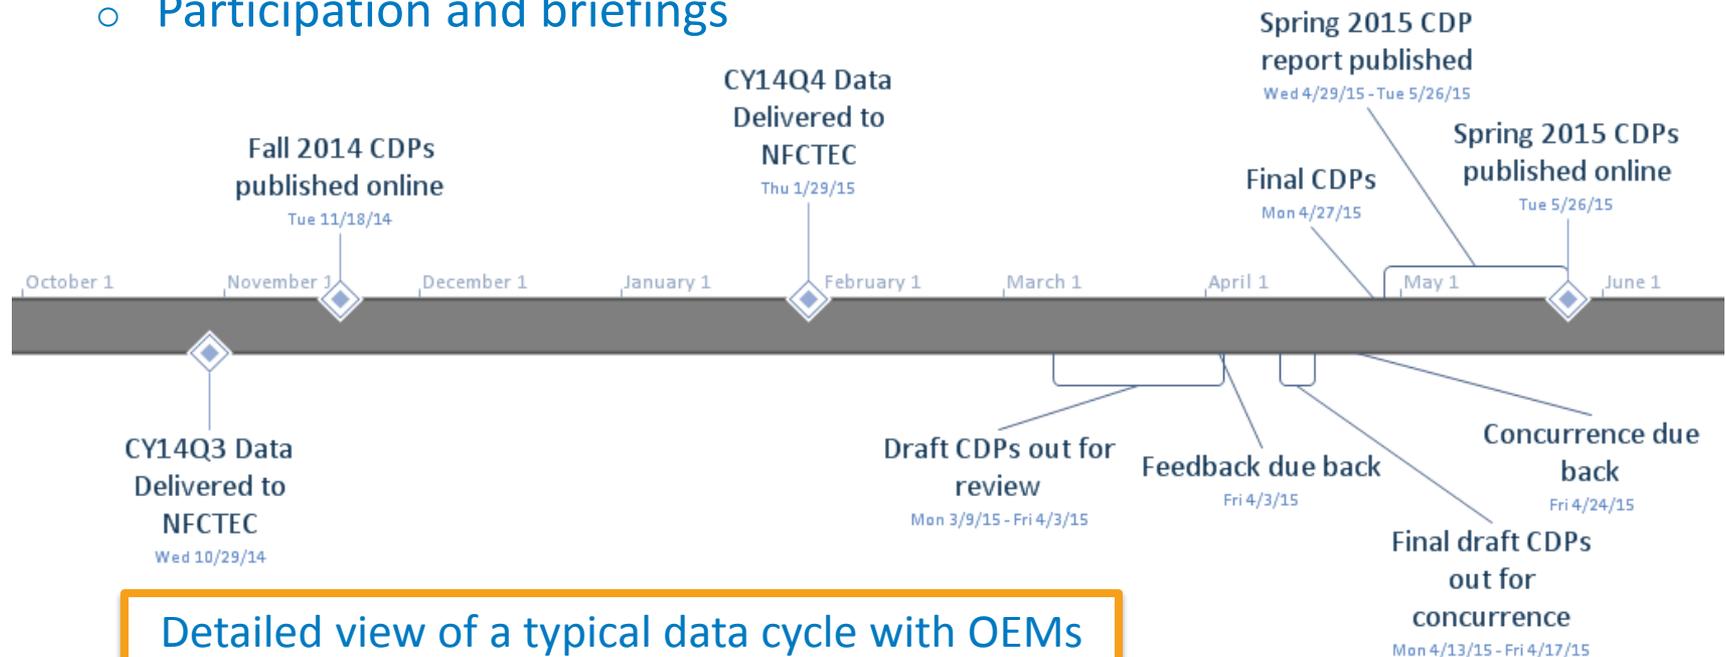

Steady progress has been demonstrated over the four evaluation periods with FCEV technology improvements especially in key technical areas like fuel cell durability, range, and fuel economy.

# Accomplishments and Progress: Responses to Previous Year Reviewers' Comments

- This project was not reviewed last year.

# Collaborations

- **Six participating OEMs – Daimler, GM, Honda, Hyundai, Nissan, Toyota. These OEMs:**
  - Supply data
  - Review detailed data analysis and approve published results
  - Review current and future analysis topics.
- **Industry working groups (CaFCP, H2USA, and FCHEA)**
  - Participation and briefings

# Remaining Challenges and Barriers

- **Validation of technical targets**
  - Durability
  - Fuel economy
  - Range
  - Efficiency
  - Reliability & Safety
  - Power specifications
  - Refueling performance
- **Relationship between FCEV and new stations coming online**
- **Impacts of hydrogen demand increasing over time**

# Proposed Future Work

- **Fall 2015**
  - Complete quarterly analysis of CY15 Q1 and Q2 data
  - Publish analysis results (10/2015)
- **Spring 2016**
  - Complete quarterly analysis of CY15 Q3 and Q4 data
  - Publish analysis results (4/2016)
- **Identify new opportunities to document fuel cell and hydrogen progress publicly**
- **Future analysis topics include**
  - the validation of technical targets for durability, fuel economy, range, reliability and safety, transient performance, power management and specifications, and refueling performance
  - Relationship between FCEVs and new stations coming online
  - Impacts of hydrogen demand increasing over time
  - Identify technology gaps and needs based on the on-road performance data

# Summary

- **Relevance**

- Independent validation of FCEV on-road performance against DOE and industry targets

- **Approach**

- Collaborate with industry partners
- Continue to develop core NFCTEC and analysis capability and tools
- Leverage 7+ years of analysis and experience from the Learning Demonstration

- **Technical Accomplishments and Progress**

- Analyzed data from six OEMs
- Performed detailed reviews of individual OEM data results
- Published results via 32 CDPs that cover topics such as deployment, fuel cell performance, durability, fuel economy, range, and driving.

- **Collaborations**

- Working closely with industry partners to validate methodology and with other key stakeholders to ensure relevance and accuracy of results

- **Future Work**

- Analyze on-road FCEVs and publish updated results in Fall 2015, and add new analysis topics
- Identify new opportunities to document fuel cell and hydrogen progress publicly
- Identify technology gaps

# Technical Back-Up Slides

# Key Analysis Topics

## *Critical*

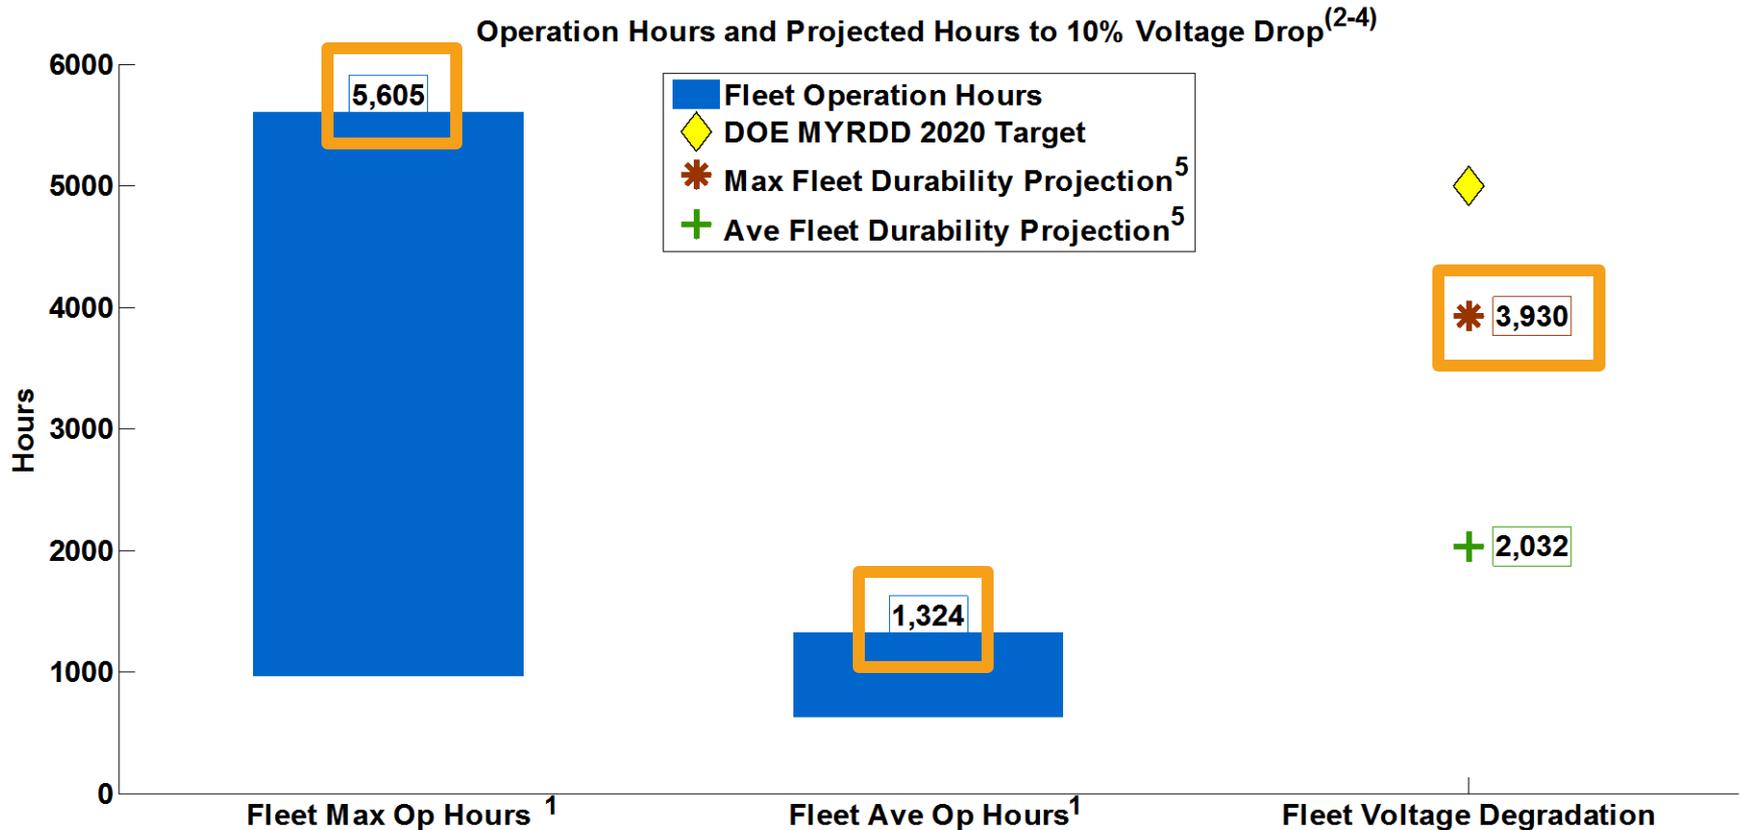

- Fuel cell durability
- Vehicle operation (hours, miles)
- Specs (power density, specific power)
- Range, fuel economy, and efficiency
- Fill performance
- Reliability

## *Important*

- Drive behaviors
- Fill behaviors
- Power management
- Energy
- Transients
- Comparisons to conventional vehicles

These key topics were selected based on review of past CDPs, targets, most commonly referenced topics, and DOE feedback.

# Accomplishment: FCEV Operation Hours and Durability

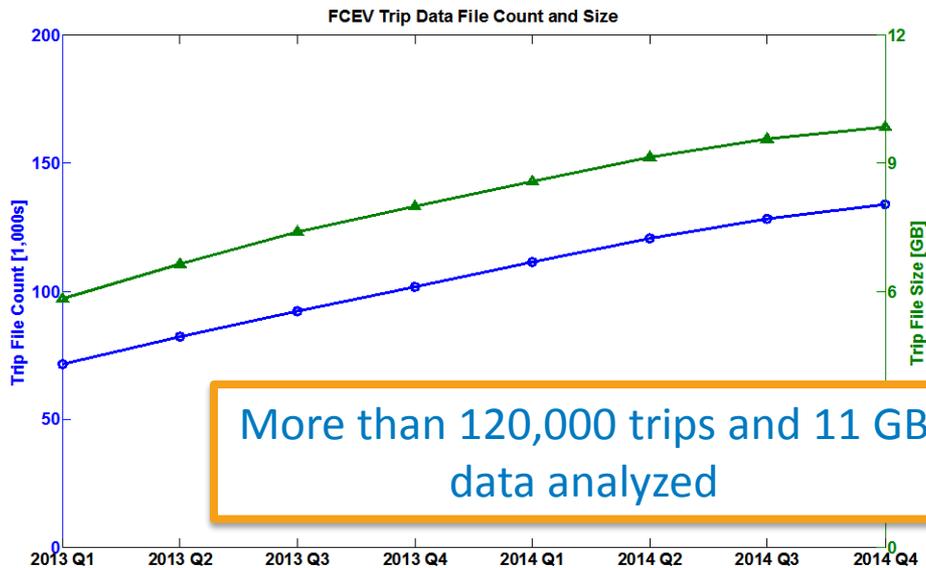

- 1) Range bars created using one data point for each fleet. Some stacks have accumulated hours beyond 10% voltage degradation.
- 2) Voltage degradation is measured based on a projected time to a voltage drop, at a high current, level 10% lower than beginning of life voltage. 10% voltage drop level is a DOE metric for assessing fuel cell durability.
- 3) Projections using on-road data are calculated at approximately 55 - 65% rated stack current.
- 4) 10% voltage drop is NOT an indication of an OEM's end-of-life criteria and projections do not address catastrophic stack failure.
- 5) Each fleet has one voltage projection value that is the weighted average of the fleet's fuel cell stack projections.

 NREL cdp\_fcev\_21  
Created: Apr

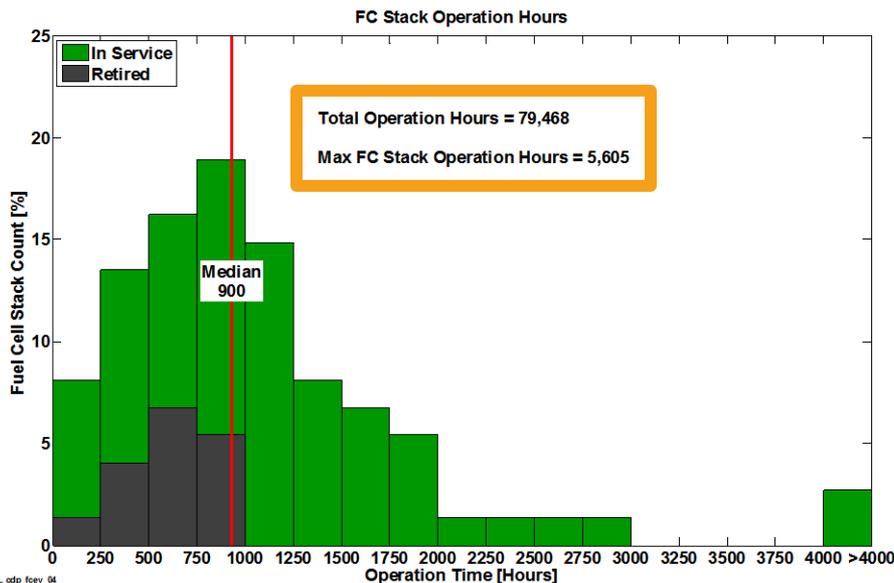

**FCEV operation hours and durability projections to 10% voltage degradation.  
Each fleet has a max and average FC operation hours value and  
a weighted average hours to 10% voltage degradation.**

33	OEM Participation Trend	Deployment	4/30/15	4/30/15	1

# Reviewer-Only Slides

# Critical Assumptions and Issues

- **Relationship between vehicle and station**
  - We are working on ways to fully understand the vehicle and station performance by studying refueling from both the vehicle and station perspective. We want to confirm performance gaps with increased hydrogen demand and new stations.
- **Availability of on-road vehicle data**
  - Vehicle OEMs are at different stages of technology generations and deployments. This can create an issue with regular data delivery and analysis.
  - We are working with vehicle OEMs to understand data availability and incorporating that into what analysis topics can be published.
- **Legacy data**
  - Supplied on-road data includes current operation, as well as legacy data if it wasn't already supplied in the Learning Demonstration project. This can create a challenge with publication of trends over time.
  - We are not able to publish all of the trend data if only one OEM has supplied data during a time period. We are also looking into ways to identify data categories based on either durability vehicles or customer vehicles.
