

# **HYDROGEN BIBLIOGRAPHY**

**December 1991**

**National Renewable Energy Laboratory  
Hydrogen Program**

**Golden, Colorado**

## **INTRODUCTION**

The Hydrogen Bibliography is a compilation of research reports that are the result of research funded over the last fifteen years. In addition, other documents have been added. All cited reports are contained in the National Renewable Energy Laboratory (NREL) Hydrogen Program Library.

It is our intent to make these copies available upon request to the extent that program funding allows.

Inquiries should be made to:

Hydrogen Program  
Materials Science and Engineering Division  
National Renewable Energy Office  
1617 Cole Boulevard  
Golden, CO 80401

FAX (303) 231-1381

# HYDROGEN BIBLIOGRAPHY

## TABLE OF CONTENTS

The Hydrogen Bibliography contains 397 entries, which have been indexed by 26 key words.

	Page
1. Alternative Fuels - General .....	1
2. Biofuels .....	11
3. Biotechnology .....	17
4. Conservation .....	18
5. Economics .....	20
6. Electrolysis .....	30
7. Environment .....	43
8. Fuel Cells .....	50
9. Government .....	54
10. Hydrogen Production .....	58
11. Hydrogen Recovery .....	69
12. Hydrogen Storage .....	71
13. International .....	89
14. Legislation .....	98
15. Liquid Hydrogen .....	100
16. Market Segments .....	102
17. Methanol .....	107
18. Natural Gas .....	111
19. Photoconversion .....	112

20.	Photovoltaics .....	120
21.	Safety .....	124
22.	Solar Production .....	128
23.	Summary .....	138
24.	Transportation .....	141
25.	Transporting Hydrogen .....	150
26.	Wind Production .....	155

The concept of an H<sub>2</sub>/O<sub>2</sub> spinning reserve system is described. The hydrogen/oxygen steam generator represents the only novel power plant component of the system. The technological basis for the new conception was achieved by research work and DFVLR and verified by means of an experimental version having a thermal capacity of 40 MW. Analyses are presented showing that investment and operating costs of an H<sub>2</sub>/O<sub>2</sub> spinning reserve system will be considerably lower than those of conventional methods. The remaining development efforts to obtain an operation system are outlined.

Work under the Hydrogen Agreement of the International Energy Agency on storage, energy conversion and safety was started in 1983 by Canada, the F.R.G., Japan, Sweden, Switzerland and the U.S.A. Some of the results achieved within the main areas of the program are summarized: hydrogen storage in metal hydrides and in liquid form, hydrogen as a fuel for ground transportation vehicles, hydrogen embrittlement of ferritic steels as well as the transition from deflagration to detonation of hydrogen-air mixtures. Based on the context of other projects, an outlook for the program is given.  
Hydrogen Storage/International.

Work under the Hydrogen Agreement of the International Energy Agency on storage, energy conversion and safety was started in 1983 by Canada, the F.R.G., Japan, Sweden, Switzerland and the U.S.A. Some of the results achieved within the main areas of the program are summarized: hydrogen storage in metal hydrides and in liquid form, hydrogen as a fuel for ground transportation vehicles, hydrogen embrittlement of ferritic steels as well as the transition from deflagration to detonation of hydrogen-air mixtures. Based on the context of other projects, an outlook for the program is given.

Work under the Hydrogen Agreement of the International Energy Agency on storage, energy conversion and safety was started in 1983 by Canada, the F.R.G., Japan, Sweden, Switzerland and the U.S.A. Some of the results achieved within the main areas of the program are summarized: hydrogen storage in metal hydrides and in liquid form, hydrogen as a fuel for ground transportation vehicles, hydrogen embrittlement of ferritic steels as well as the transition from deflagration to detonation of hydrogen-air mixtures. Based on the context of other projects, an outlook for the program is given.

Work under the Hydrogen Agreement of the International Energy Agency on storage, energy conversion and safety was started in 1983 by Canada, the F.R.G., Japan, Sweden, Switzerland and the U.S.A. Some of the results achieved within the main areas of the program are summarized: hydrogen storage in metal hydrides and in liquid form, hydrogen as a fuel for ground transportation vehicles, hydrogen embrittlement of ferritic steels as well as the transition from deflagration to detonation of hydrogen-air mixtures. Based on the context of other projects, an outlook for the program is given. Hydrogen Storage/International.
