# Outline

- Overall Working Group Goals
- Challenges
- Workshop Summary
- Data Collection/Sharing
- Example Data from U.S.
  - Santa Clara VTA, San Jose, CA

# Overall Goals

In 2003, the U.S. Federal Transit Administration began an effort to form a Fuel Cell Bus (FCB) Work Group.

The goals of the group were to:

- Enhance information sharing on the status of FCB demonstrations worldwide
- Harmonize data collection and evaluation to maximize possible learnings
- Facilitate coordination and collaboration of research, development, and demonstration of future FCBs

# Challenges

- Gaining participation from “appropriate” people:
  - Representatives involved with demonstration/data collection
  - Authority to commit to sharing data
  - Availability/willingness to attend workshops
- Solutions:
  - Hold workshops in conjunction with events likely to draw “appropriate” people
  - Invitations to specific individuals involved in demos
  - Establish diverse organizing committee (FTA joined by EU in planning and funding)
  - Rotate locations of workshops to cover multiple countries

# Challenges

- Consensus on data collection:
  - Building common data element list
  - Addressing challenges from many country perspectives
- Solutions:
  - Develop multiple levels of data sharing:
    - High level data – non-sensitive data that can be made publicly available (Phase I and II)
    - More detailed data – potentially sensitive data shared with work group participants only
  - Begin constructing list by comparing common data items already being collected
  - Involve all work group participants in decision process

# Challenges

- Gaining agreement to share data:
  - Involvement from all demonstrations/teams
  - Willingness to share information that will further advance the technology and not let marketing get ahead of the true status
- Solutions:
  - Begin with collecting the Phase I, high level data to build trust between participants
  - Work as a group to develop the strategy for collecting and sharing data

# Workshops

1<sup>st</sup> Workshop: Long Beach,  
California, USA

Nov. 19 – 20, 2003

Associated event: EVS 20

2<sup>nd</sup> Workshop: Porto, Portugal

Nov. 18 – 20, 2004

Associated event: CUTE project  
meeting

3<sup>rd</sup> Workshop:  
Vancouver, BC,  
Canada

Dec. 4 – 6, 2005

Associated event:  
EDTA Conference

4<sup>th</sup> Workshop: Yokohama, Japan

Oct 21 - 13, 2006

Associated event: EVS 22

# Data Collection/Sharing

- Established three levels of data:

Phase I	Phase II
High Level	Medium Level
Non-sensitive	Somewhat sensitive
General information on project, operating fleet, buses, infrastructure	<b>Bus data:</b> Fuel consumption, availability, reliability, maintenance <b>Infrastructure data:</b> fueling rates, efficiency, availability, maintenance
Will be shared	Will be shared
Status: Data collection in progress	Status: Finalizing list of data

Detailed Data
Proprietary
Detailed voltage and current data on the FC and systems
Will not be shared

# DOE/NREL FCB Evaluation Results

## Santa Clara VTA

- 3 prototype FCBs: Gillig buses with Ballard FC system (non-hybrid)
- Diesel buses for baseline comparison

Fuel Cell Bus

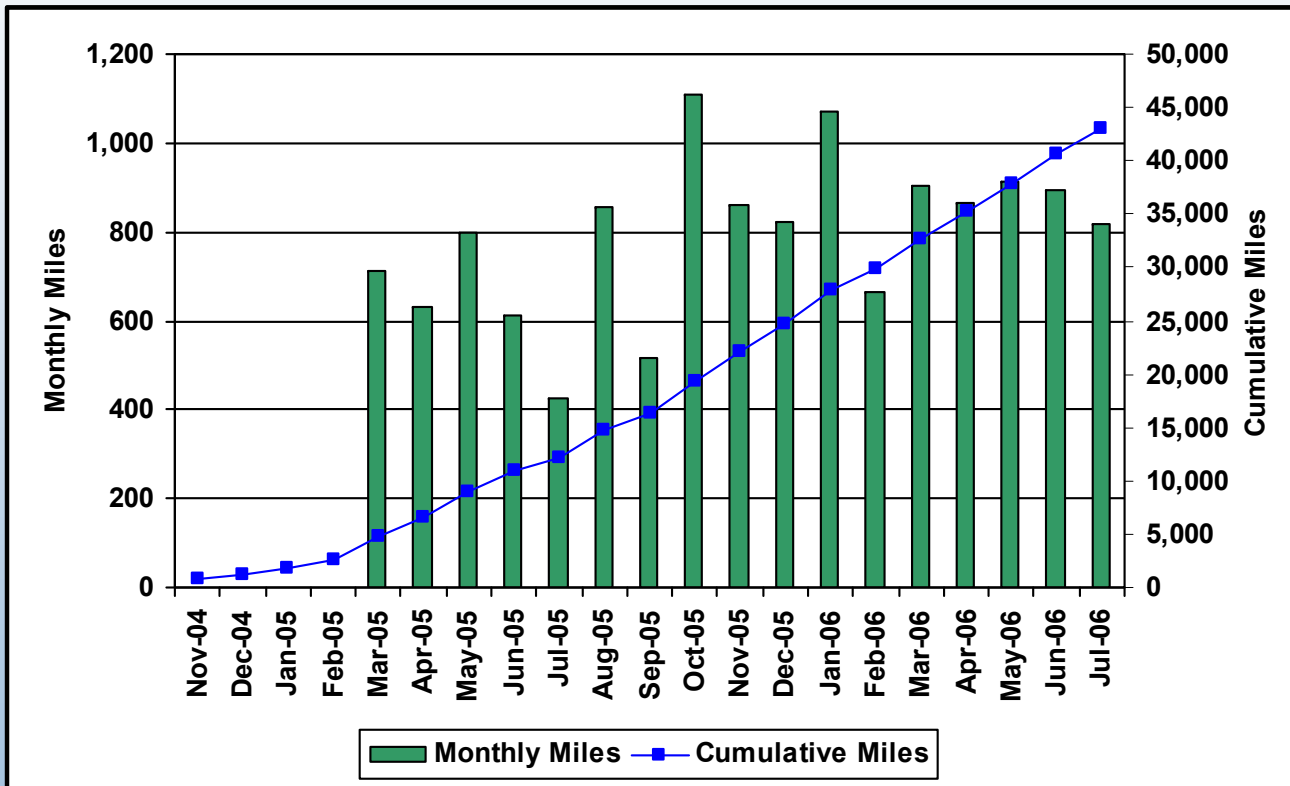

Diesel Bus

Vehicle System	Cerone Depot	
	Fuel Cell Buses	Diesel Buses
Number of Buses	Three	Five
Bus Manufacturer and Model	Gillig low-floor	Gillig low-floor
Model Year	2004	2002
Length/Width/Height	40 feet/102 in/144 in	40 feet/102 in/120 in
GVWR/Curb Weight	40,600 lb/34,100 lb	39,600 lb/27,300 lb
Wheelbase	284 in	284 in
Passenger Capacity	37 seated or 29 seated and two wheelchairs, five standing	38 seated or 31 seated and two wheelchairs, 43 standing
Engine Manufacturer and Model	Two Ballard fuel cell modules P5-2	Cummins ISL (8.9 liter)
Rated Power	150 kW each (300 kW total)	280 bhp @ 2,200 rpm
Rated Torque	790 lb-ft @ 1,350 rpm (1250 Nm)	900 lb-ft @ 1,300 rpm
Accessories	Mechanical	Mechanical
Emissions Equipment	None	Diesel oxidation catalyst
Fuel Capacity	Approx. 55 kg hydrogen at 5,000 psi	115 gallons

# FCB Usage

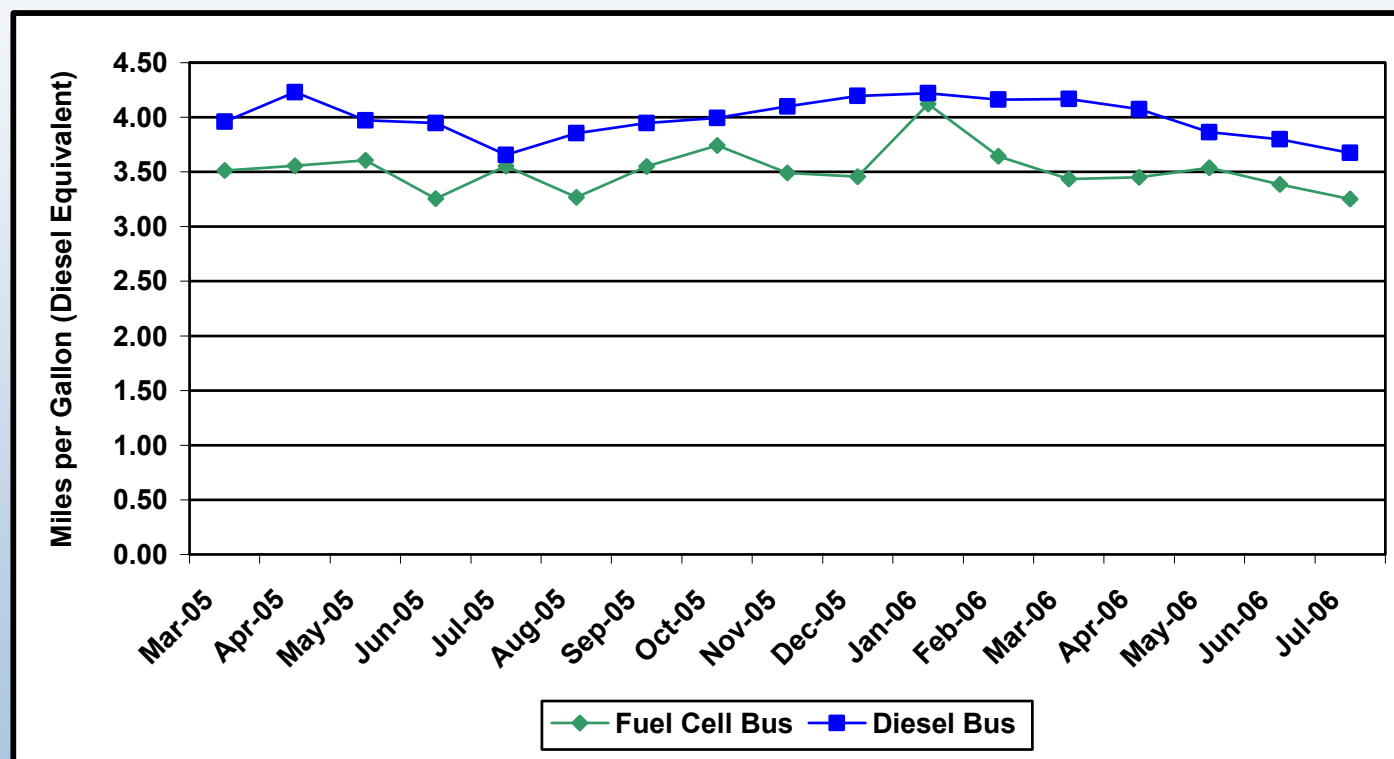

## Cumulative and monthly mileage on VTA FCBs

- 40,000 total fleet miles
- 3,219 total FC hours
- All 3 buses over 1,000 hours
- Average monthly mileage/FCB: 809 mi

# Fuel Economy

## Average Fuel Economy for FCBs and Diesel Controls

Fuel economy for the FCBs averaged 3.12 mi/kg; 3.52 mi/diesel equivalent gallon vs. 3.98 mpg for the diesel control buses (-12%)

# Availability

- Availability

- Planned use of the FCB:

- 2 of the 3 buses in service each weekday except for holidays
    - Extra service (between regularly scheduled buses)

- Goal for FCBs: 67% availability

- Actual availability during evaluation period: 58%

- Diesel buses: 85%

- Breakdown:

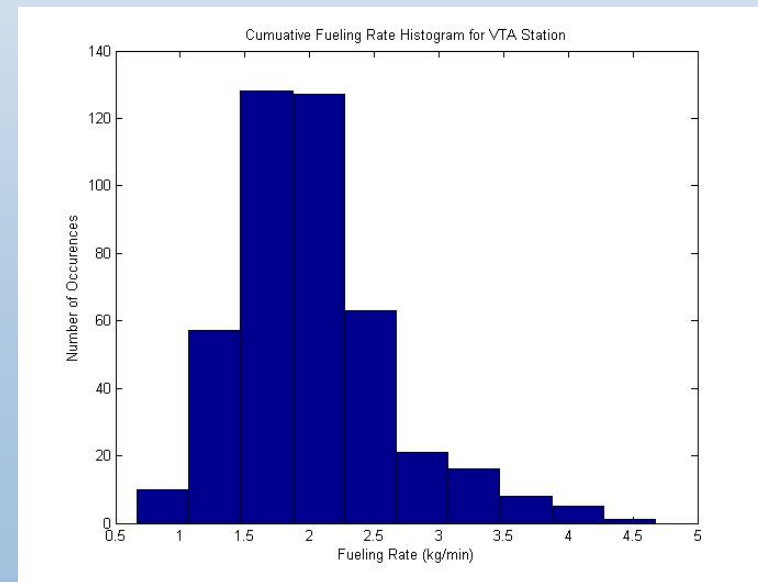

# Infrastructure

- Infrastructure
  - Liquid H<sub>2</sub> delivery and storage
  - Station availability: 99%

- Fueling Rates for the year in kg/min
  - 460 bus fills
  - Rate Max 4.67, Min 0.66
  - Avg Rate 1.93
  - Avg fill amt: 30.9 kg
