

Wind Energy Education and Training Programs

Wind Powering America's Wind for Schools project focuses on university educators and students to counter the trend of reduced numbers of U.S. students entering science and engineering fields. The project's goals are to equip college and university students with an education in wind energy applications and introduce K-12 teachers and students to wind energy.

Wind Energy Education and Training Programs

Photo by Judi Sigler, NREL/PIX 16254

As the United States dramatically expands wind energy deployment, the industry is challenged with developing a skilled workforce to support it. The Wind Powering America website features a map of wind energy education and training program locations at community colleges, universities, and other institutions in the United States. The map includes links to contacts and program details.
