

# Project Financing, Policy, and Incentives

Tian Tian

City and County Solar PV Training Program  
Module 4

NREL/PR-6A20-71333

NREL is a national laboratory of the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, operated by the Alliance for Sustainable Energy, LLC.

This work was authored by Alliance for Sustainable Energy, LLC, the Manager and Operator of the National Renewable Energy Laboratory for the U.S. Department of Energy (DOE) under Contract No. DE-AC36-08GO28308. Funding provided by the U.S. Department of Energy Office of Energy Efficiency and Renewable Energy Solar Energy Technologies Office. The views expressed in the article do not necessarily represent the views of the DOE or the U.S. Government. The U.S. Government retains and the publisher, by accepting the article for publication, acknowledges that the U.S. Government retains a nonexclusive, paid-up, irrevocable, worldwide license to publish or reproduce the published form of this work, or allow others to do so, for U.S. Government purposes.

The data, results, conclusions, and interpretations presented in this document have not been reviewed by technical experts outside NREL or the Solar Energy Technologies Office.

---

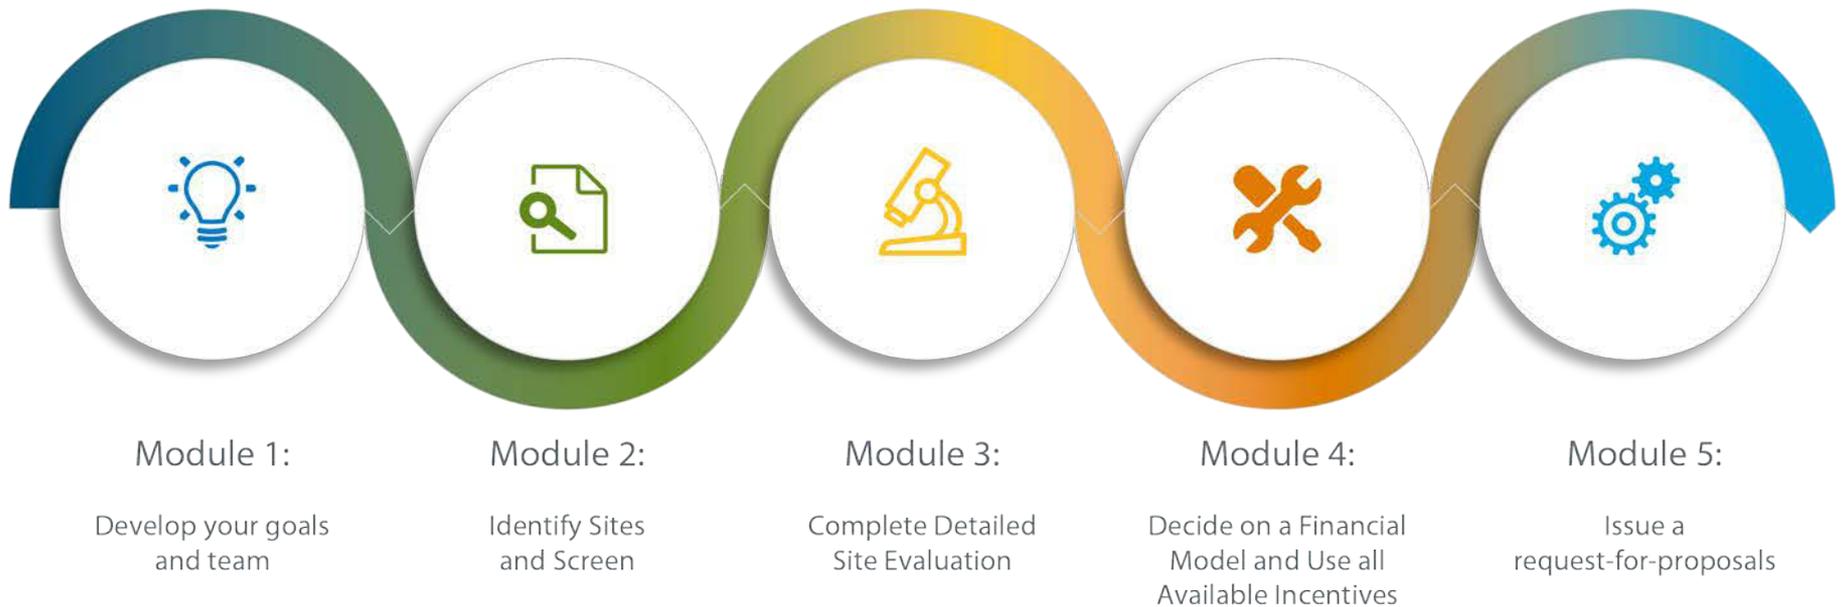

This document was prepared as an account of work sponsored by an agency of the United States government. Neither the United States government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States government or any agency thereof. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States government or any agency thereof.

This presentation was recorded as part of NREL's City and County Solar Photovoltaics Training Program.

# PV Project Implementation Process

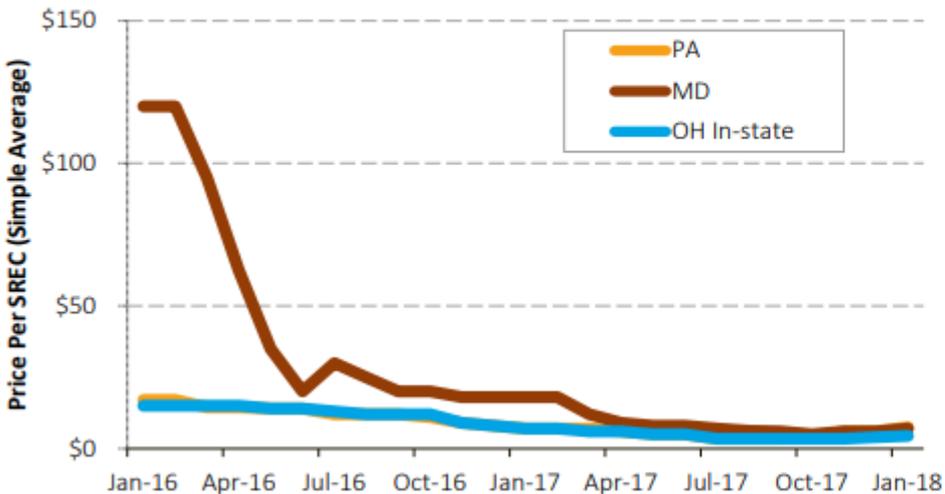

# Policies and Incentives

---

# Renewable Portfolio Standards

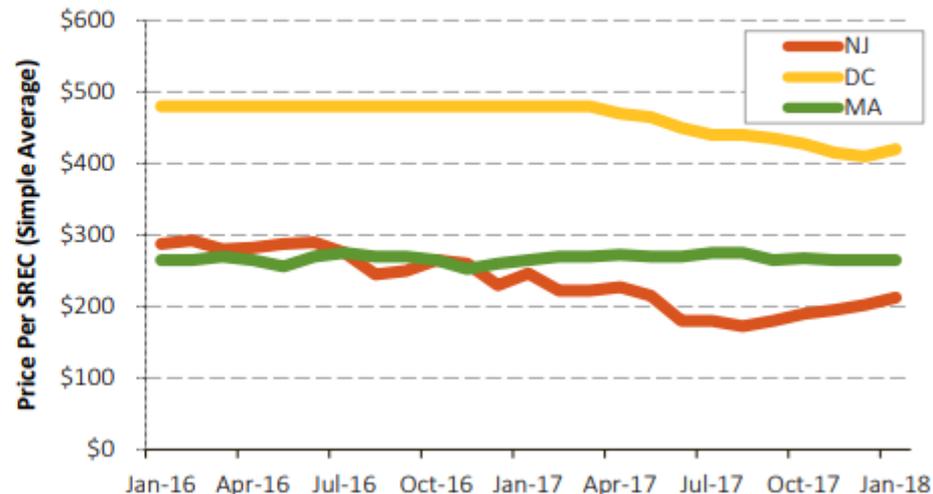

## Solar Renewable Energy Certificates Recent Price Trends

Lower-Priced Markets

Source: SREC Trade

Higher-Priced Markets

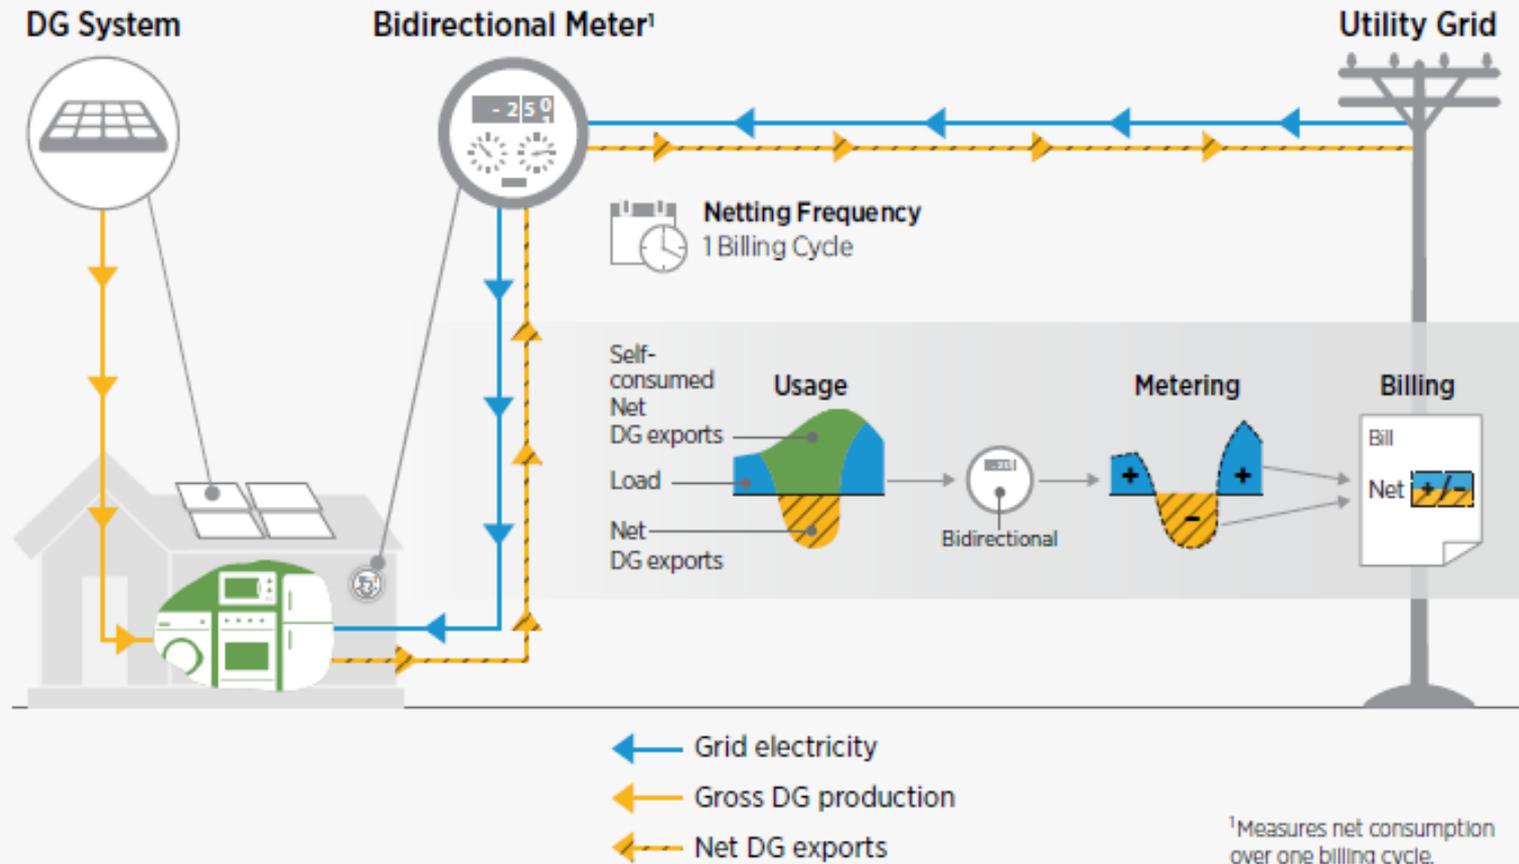

## Checklist

- ✓ Availability of REC or SREC market
- ✓ Decision to sell RECs
- ✓ Eligibility for solar or distributed generation multiplier or factor

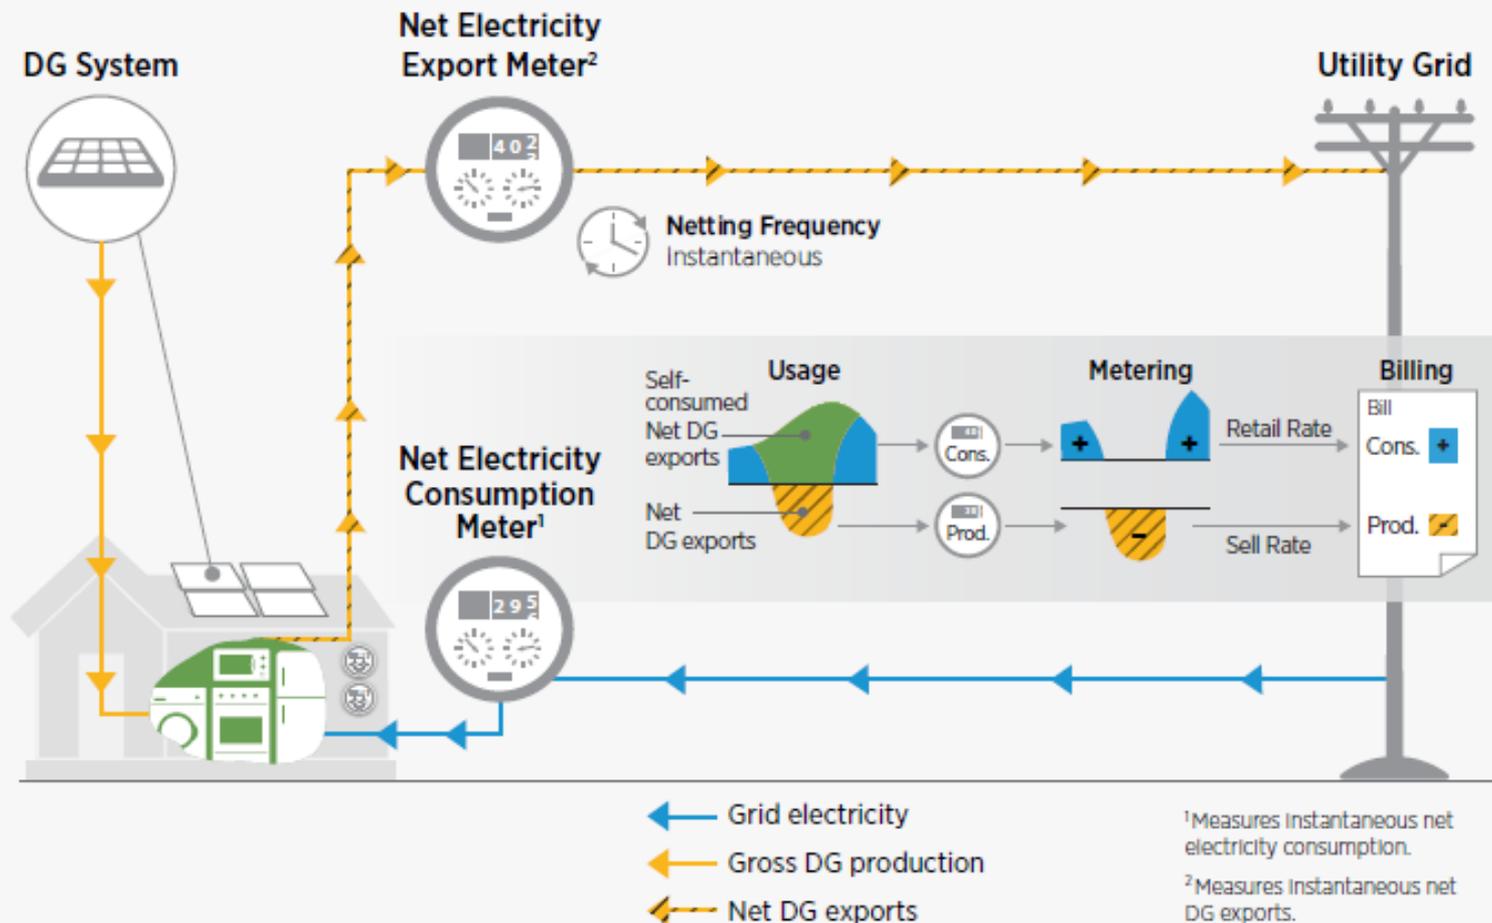

# Net Metering

## NET ENERGY METERING

# Net Billing

## NET BILLING

Source: NREL (2017). <https://www.nrel.gov/docs/fy18osti/68469.pdf>

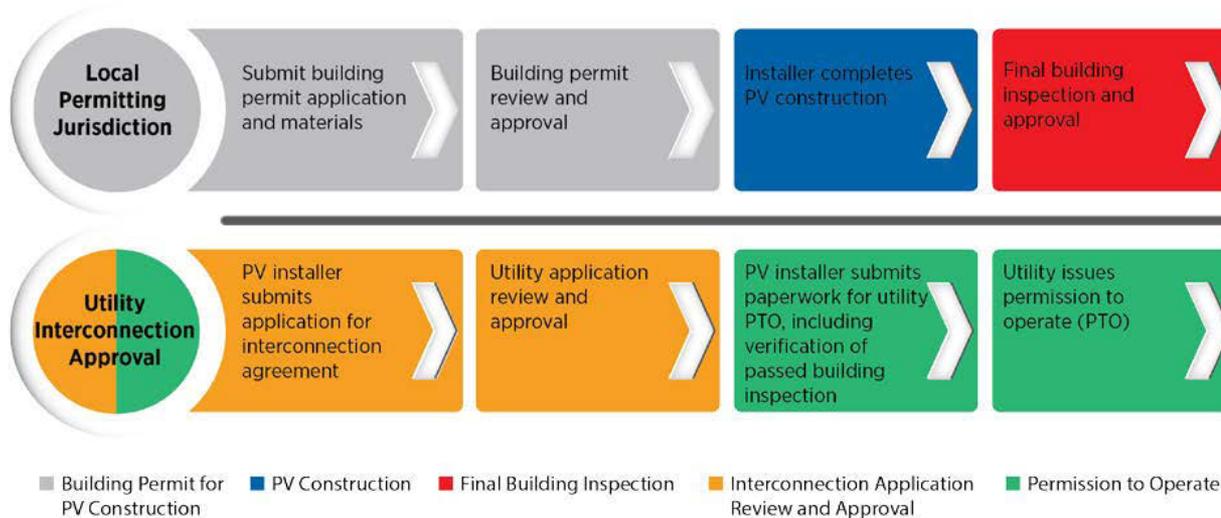

# Net Metering and Billing

## Checklist

- ✓ System size under consideration is eligible for the program
- ✓ Ensure rates are favorable to project economics
  - User fees: customer fixed charges, demand charges, standby rates
- ✓ Aggregate capacity limit
- ✓ Ownership of RECs
- ✓ Meter aggregation

# Interconnection

## Permitting and Interconnection Process

## Associated Costs

Interconnection fees, application fees, metering charges, equipment fee, feasibility study, impact study

Permitting fees, engineering and inspection fees, electrical permit fees, zoning permit fees, building permit fees

# Interconnection

## Checklist

- ✓ Availability of standardized interconnection for small generators:
  - System size limits
  - Net metering requirement
- ✓ Availability of online application portal
- ✓ Qualification for fast-track or expedited interconnection
- ✓ Insurance requirements:
  - Liability insurance requirements
  - Utility as additional insured party
- ✓ Safety equipment:
  - External disconnect switch

# Financial Incentives

**Rebates/grants:** Direct up-front payment to solar investors. Rebate and grant programs may be administered at both the state- and utility-level.

**Performance-based incentives:** Similar to rebates/grants except that the payment amount depends on the output of the solar system.

**Loan programs:** Facilitate the financing of solar projects without making a direct payment. Loan programs may be administered at both the state and utility level.

**Tax incentives:** Exemption of solar project investments from property, sales, and/or income taxes. Some states also provide tax credits for solar project investments.

# Financial Incentives

## Checklist

- ✓ System eligibility:
  - System size caps
  - Sector
  - Levels of incentive
  - Total funds or capacity available
- ✓ State and local tax considerations:
  - Net income tax
  - Sales and use tax
  - Property tax
- ✓ REC ownership

# Community Solar

## Types of models

**Utility-sponsored model:** Utilities own and operate a project and offer multiple retail customers the option to purchase solar electricity from a shared facility.

**Nonprofit model:** Donors contribute to a shared solar installation owned by a nonprofit organization.

**On-bill crediting special purpose entity model:** Commercial and/or residential entities jointly invest in a portion of a shared solar through a special purpose entity.

	Utility	Special Purpose Entity	Nonprofit
<b>Owned By</b>	Utility or third party	SPE members	Nonprofit
<b>Financed By</b>	Utility, grants, ratepayer subscriptions	Member investments, grants, incentives	Memberships, donor contributions, grants
<b>Hosted By</b>	Utility or third party	Third party	Nonprofit
<b>Subscriber Profile</b>	Electric rate payers of the utility	Community investors	Donors, members
<b>Subscriber Motive</b>	Offset personal electricity use	Return on investment; offset personal electricity use	Return on investment; philanthropy
<b>Long-term Strategy of Sponsor</b>	Offer solar options; add solar generation (possibly for Renewable Portfolio Standard)	Sell system to host; retain for electricity production	Retain for electricity production for life of system

# Community Solar

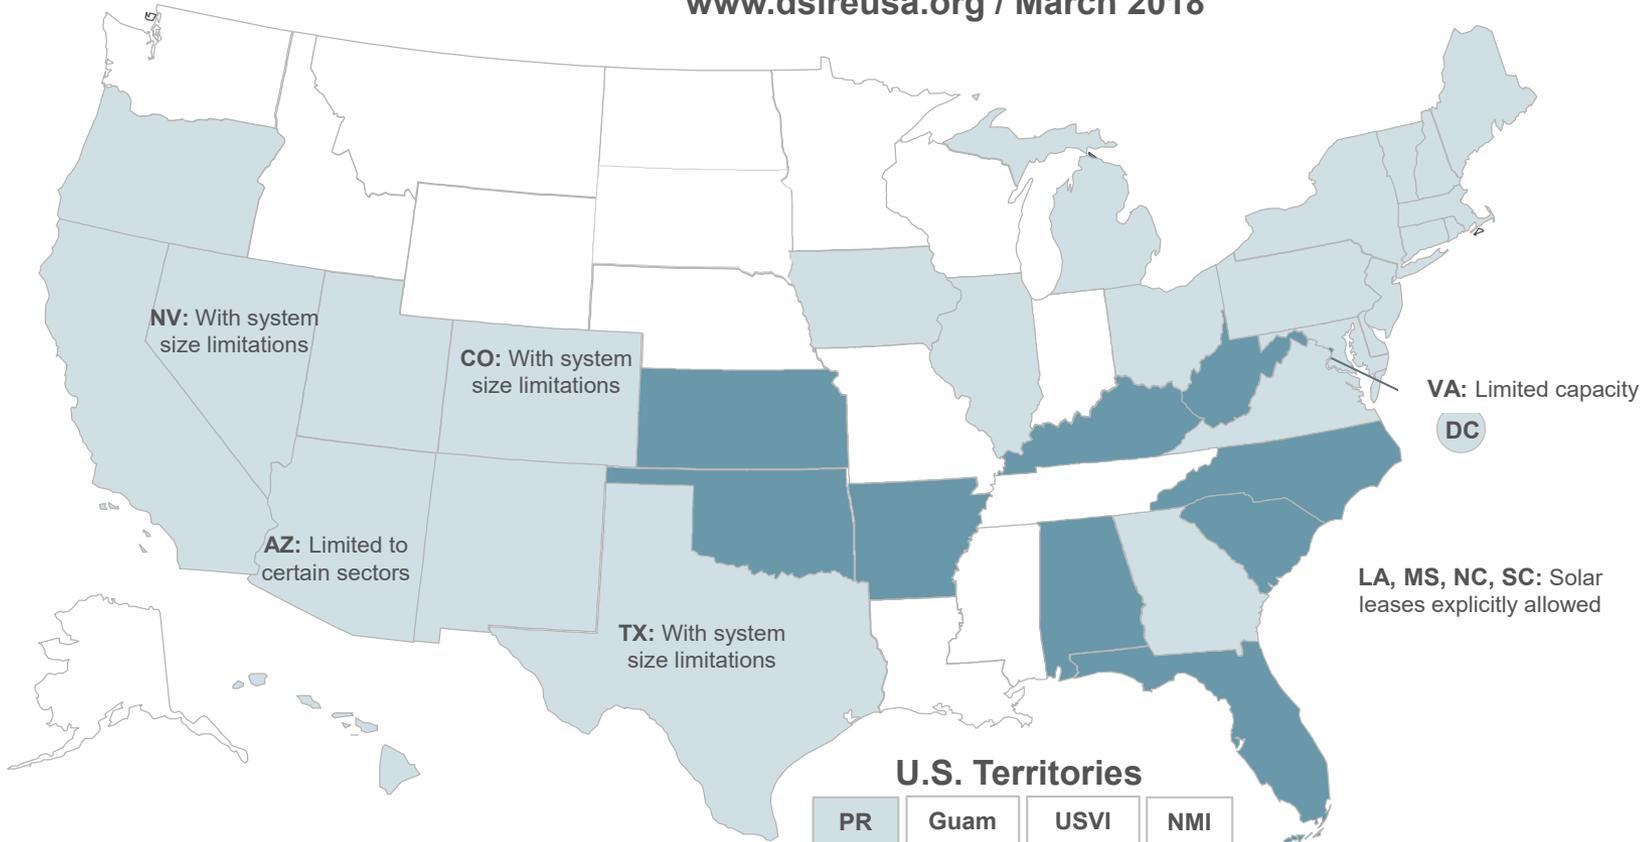

## Checklist

- ✓ Availability of billing credit mechanisms
- ✓ Check for system size eligibility
- ✓ Transferability
- ✓ Check for ownership models and evaluate suitability of model
- ✓ Allocation of benefits from participation:
  - Electricity from solar system
  - Renewable Energy Credits
  - Federal tax credits and deductions
  - Accelerated depreciation
  - State and utility rebates and incentives

# Third Party Ownership

## 3<sup>rd</sup> Party Solar PV Power Purchase Agreement (PPA)

[www.dsireusa.org](http://www.dsireusa.org) / March 2018

- Apparently disallowed by state or otherwise restricted by legal barriers
- Authorized by state or otherwise currently in use, at least in certain jurisdictions
- Status unclear or unknown

# Third Party Ownership

## Checklist

- ✓ Existing policy on Third Party Ownership
- ✓ PPA model's compatibility with state incentives
- ✓ Ownership of RECs

# Knowledge Check

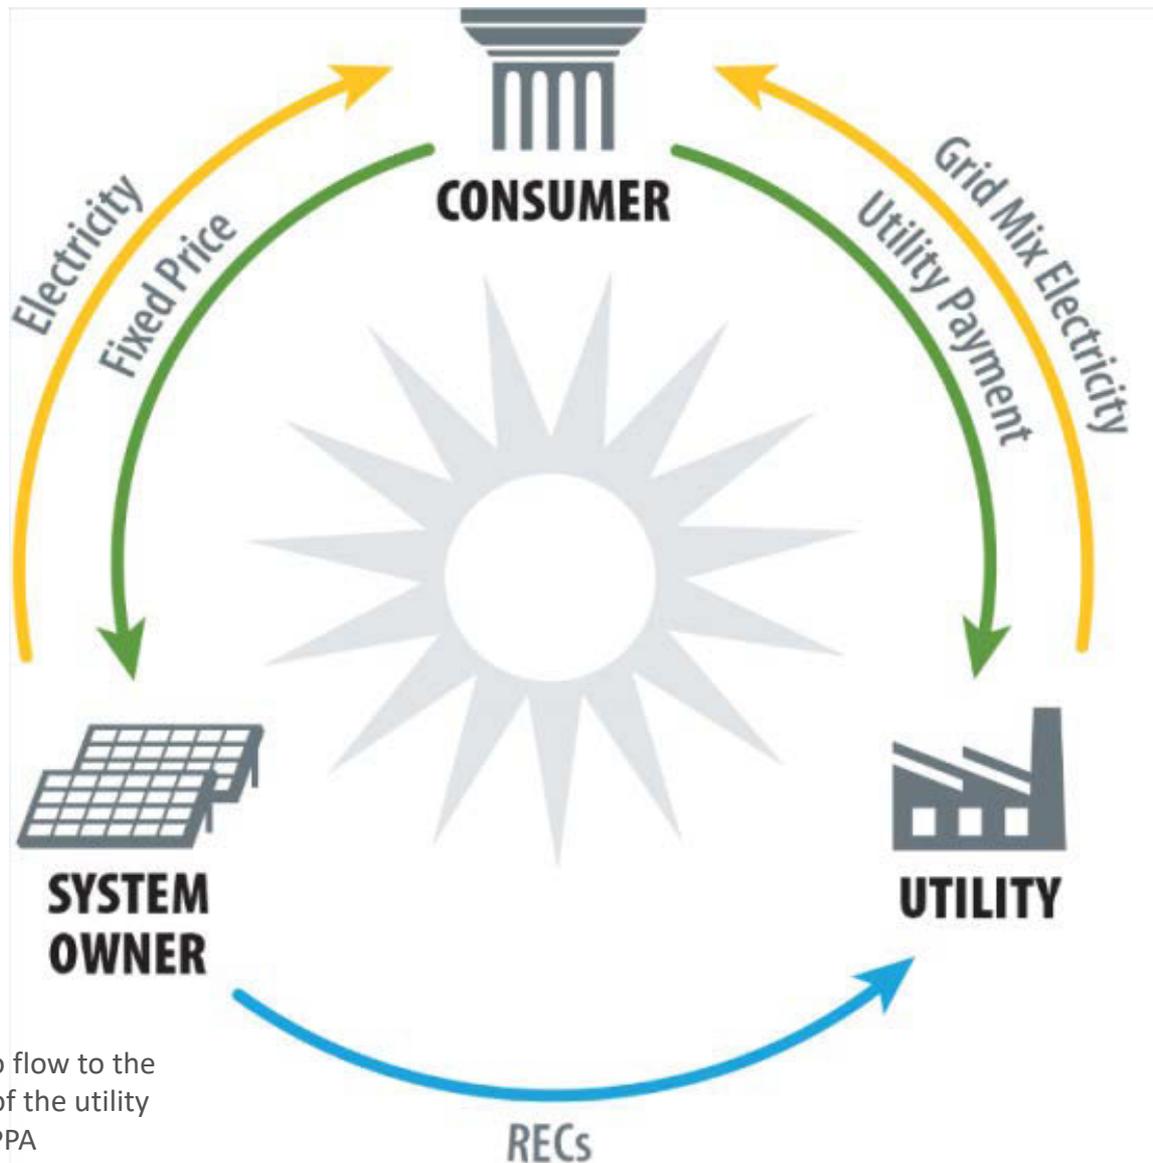

- Which of these may be PV financial incentives offered by state governments? (check all that apply)
  - Interconnection standards for small inverter-based systems (false)
  - Rebates based on system size (true)
  - Property tax exemption (true)
  - Community solar development guidelines (false)

# Financing Structures

---

Subtitle or additional text

# Third Party Financing Model

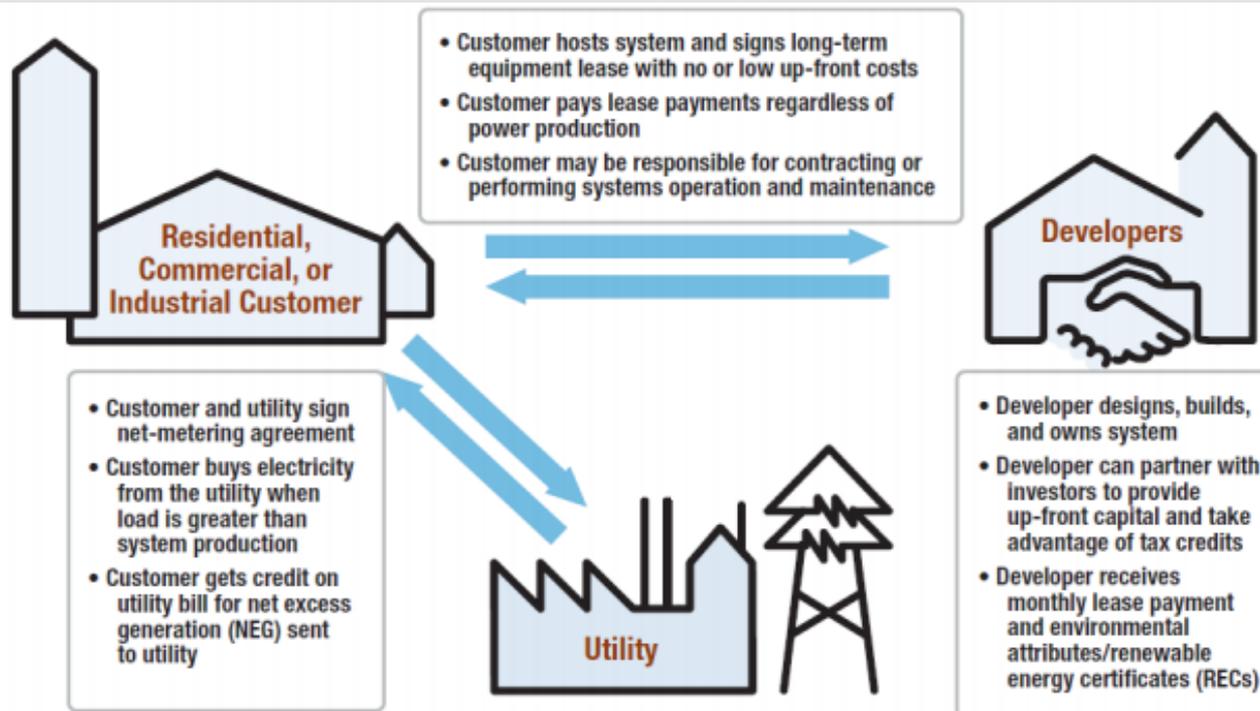

Note: RECs can also flow to the consumer instead of the utility depending on the PPA structure

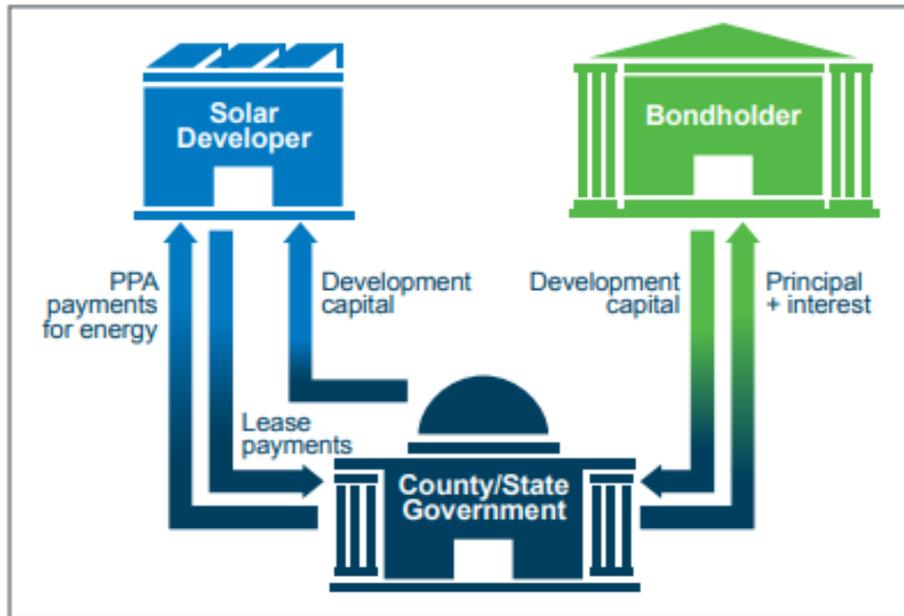

# Alternatives to PPA Model

- Solar Leases
- Utilities as Contractual Intermediaries
- Utility Ownership
- Clean Renewable Energy Bonds (no longer available)

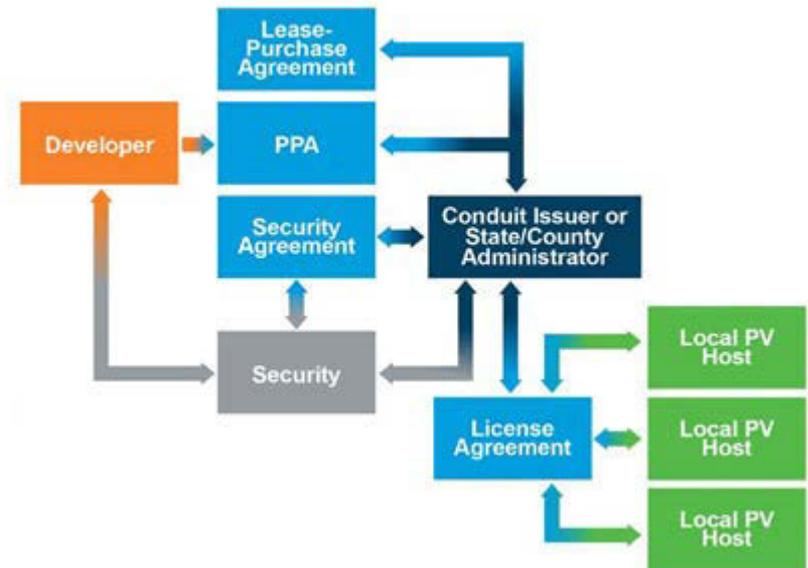

## Solar Lease Structure

# Bond-PPA Hybrid Model

**Money transfers in the hybrid model**

**Contract arrangements in the hybrid model**

# Third Party vs Self Ownership

	Third-Party PPA	Self-Ownership
<b>Advantages</b>	<ul style="list-style-type: none"><li>• No or low upfront capital</li><li>• Ability for tax-exempt entity to benefit from savings passed on from federal tax incentives</li><li>• Predetermined electricity price for 15–25 years</li><li>• No operating and maintenance responsibilities</li><li>• Path to ownership (if included as an option in PPA)</li></ul>	<ul style="list-style-type: none"><li>• Access to cheap public debt</li><li>• Full control over a project: design, operations, and risks</li><li>• Ability to decide on ownership of renewable energy attributes generated by the project</li></ul>
<b>Challenges</b>	<ul style="list-style-type: none"><li>• The process of negotiating a PPA can be lengthy and burdensome</li><li>• Public entity has limited control over project design, operations, and risks</li><li>• PPA pricing may be sub-optimal (developer could receive most of the financial benefits)</li></ul>	<ul style="list-style-type: none"><li>• The public entity cannot monetize the value provided by federal renewable energy tax incentives</li><li>• Need expertise to navigate potential revenues from renewable-portfolio-standard-driven subsidies</li><li>• Debt issues and limitations could prohibit the projects</li></ul>

# Knowledge Check

- What is an advantage for a public entity or nonprofit to own its own solar PV system on its facilities instead of entering a PPA agreement with a third-party?
  - Ability to capture savings from federal ITC (false)
  - Full control over a project: design, operations, and risks (true)
  - Predetermined long-term electricity price (false)
