2020 Microgrid R&D Program Peer Review

Program Manager: Dan Ton

June 2020
DOE Office of Electricity

The Office of Electricity (OE) drives electric grid modernization and resiliency in the energy infrastructure.

- OE leads the Department of Energy’s efforts to ensure a resilient, reliable, and flexible electricity system.
- OE serves as the Energy Sector Specific lead for the Federal emergency response when activated by DHS/FEMA.
## Advanced Grid R&D within OE

Microgrid R&D Program Areas

- Remote, Off-Grid Microgrids
- Grid-Connected Microgrids
- Networked Microgrids
- Resiliency Modeling (Inc. DCEI Applications)
- Standards and Testing
FY 20 Funding by Program Area

FY20: $9.9M

- Remote MGs: 5%
- Grid-Connected MGs: 15%
- Networked MGs: 25%
- MG Standards: 5%
- Resiliency Modeling: 36%
- Other*: 14%

* Other: Corporate + NARUC-NASEO MG State WG
Remote, Off-grid Microgrids

Meet community-specific goals.

In Alaska, the goal is to achieve a reduction in total imported fuel usage by 50%, while lowering system life-cycle cost and improving reliability and resiliency.

Grid-Connected Microgrids

Develop commercial scale (< 10 MW) microgrid systems that:
- Reduce outage time of critical loads by > 98% at a cost comparable to non-integrated baseline solutions (uninterruptible power supply + diesel generator)
- Reduce emissions by > 20%
- Improve system energy efficiencies by > 20%
- Meet individual community-defined objectives for electricity system resiliency

</tbody>
</table>
Networked Microgrids

Achieve the following, as compared to a baseline of individually designed and operated microgrids:

- During extreme event outages, improve customer-level reliability and resilience by:
  - Extending duration of electrical service to critical loads by at least 25%;
  - Maintaining electrical service for all critical loads during a single generator contingency in any microgrid; and
  - Lowering capital expense by at least 15%.

- During normal distribution grid operations:
  - Reduce the utility cost of serving the microgrids by at least 10%.

Resiliency Modeling for Defense Critical Electric Infrastructure (DCEI) Applications

Produce rapid, repeatable methodology, by employing existing and proven tools from DOE, DoD, and DHS to perform a threat-informed technology assessment for providing assured power at critical defense facilities

The project review is closed to general public to conform to classification guidance.
International Collaboration

Under U.S.-India Joint Clean Energy Research and Development Center (JCERDC), a collaboration (10 academic and 18 private partners from India and U.S.) to develop and demonstrate DSO functions for optimal utilization and management of DER by interfacing DER control and microgrid control system as well as analysis of prototype feeders with high penetration of energy storage.

Microgrid Standards

FY19

• Established respective Working Groups for the approved PARs
  • IEEE P2030.12: Guide for the Design of Microgrid Protection Systems
• Published Microgrid Protection: Advancing the State of the Art
  • Laid out technical basis for guidelines for MG protection

FY20-FY21

• Continuing support in developing two new standards toward completion
  ➢ IEEE P2030.11: Aug 2021
  ➢ IEEE P2030.12: Dec 2022
• Continuing to promote the acceptance and adoption of approved MG standards
  ➢ IEEE Std 2030.7
  ➢ IEEE Std 2030.8
Broad Partnerships
Peer Review Meeting: General Items

- 40 minutes for each project
  - 30 minutes for uninterrupted presentation
  - 10 minutes for Q/A, addressing Qs in the order of: peer reviewers → DOE personnel → general audience

- Peer reviewers’ evaluation results to be used by the DOE to plan for FY21 tasks

- Peer review presentations and project summaries to be made available after the meeting
Thank You
