Deploy Smart Infrastructure

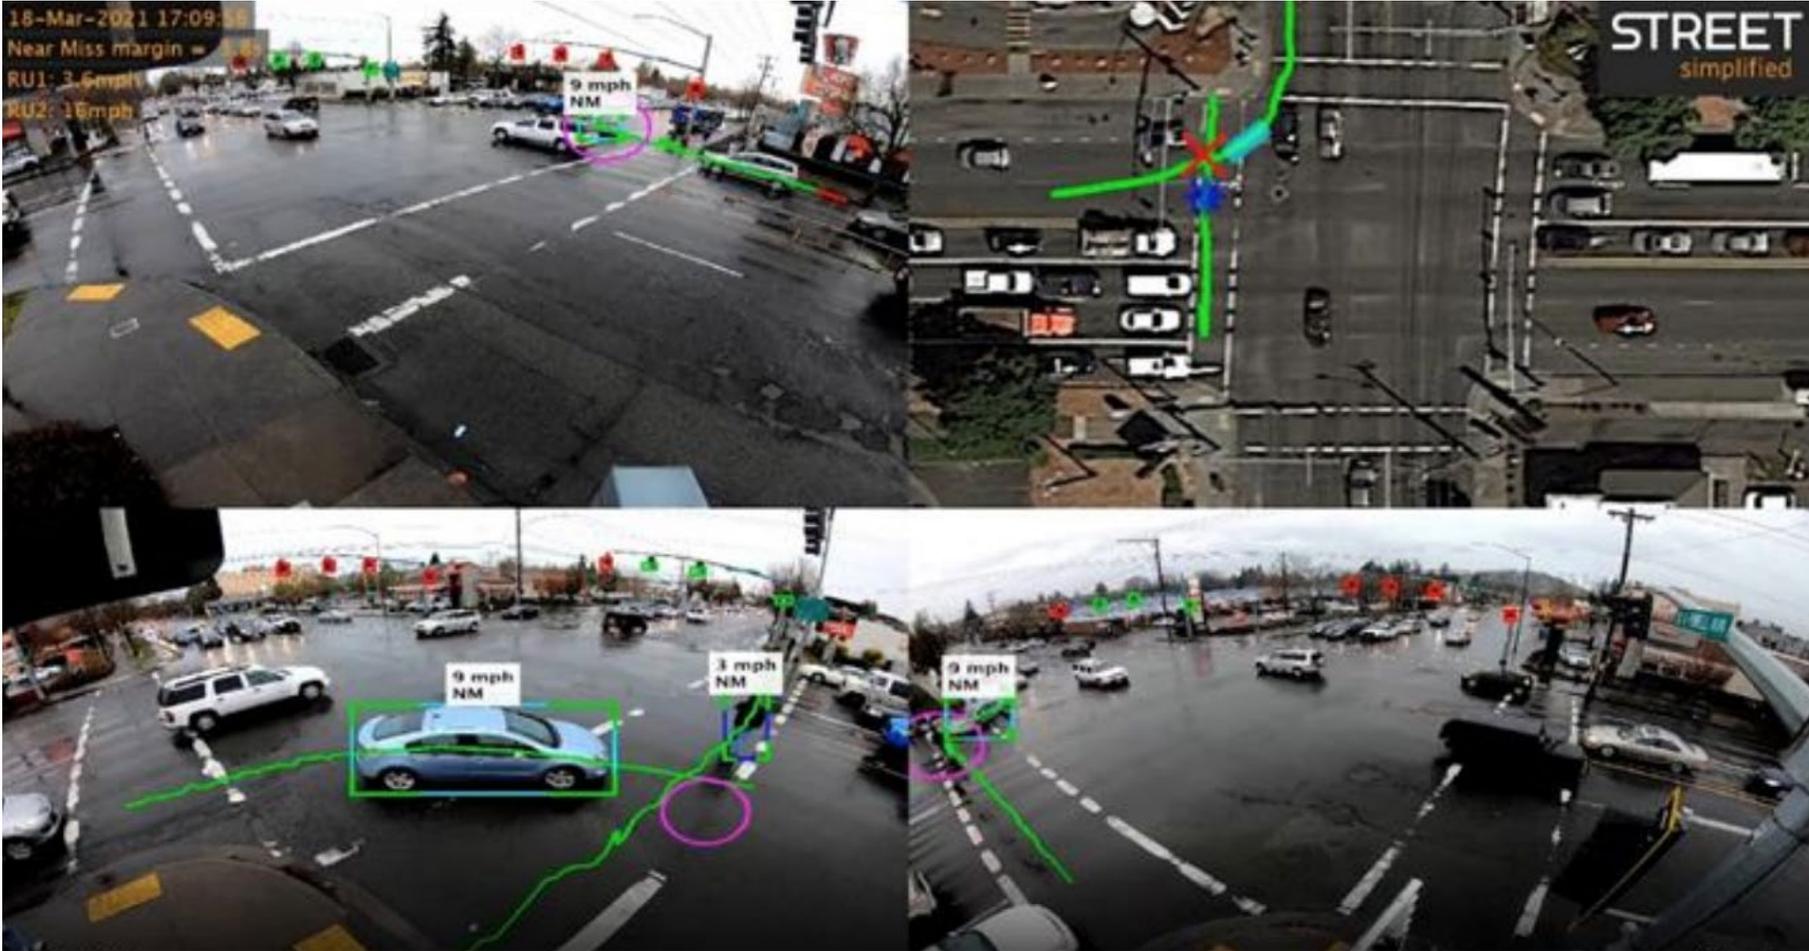

- State-of-the-art Deep Learning/AI algorithms, computer vision, edge computing and IoT systems to **provide real-time data for intelligent decision-making** as smart transportation solutions at congestion and safety roadway hotspots, such as signalized intersections and mid-blocks

The Rich Data and Information

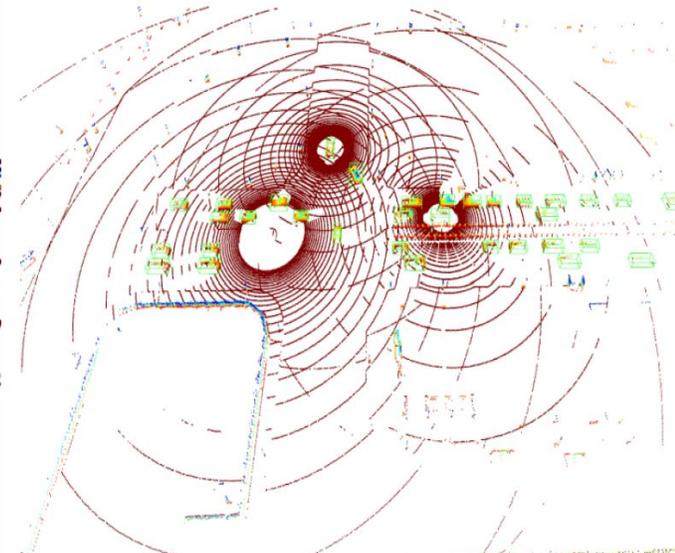

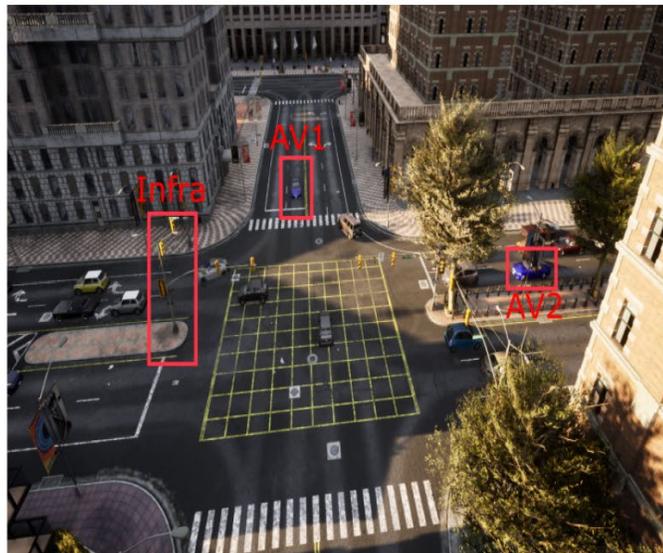

Next-Gen Safety Analytics

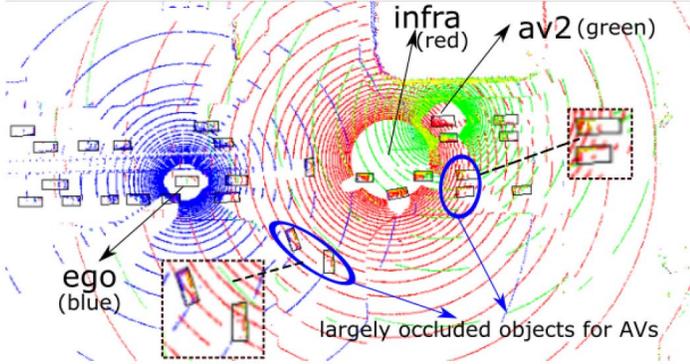

Infrastructure-assisted Automated Driving

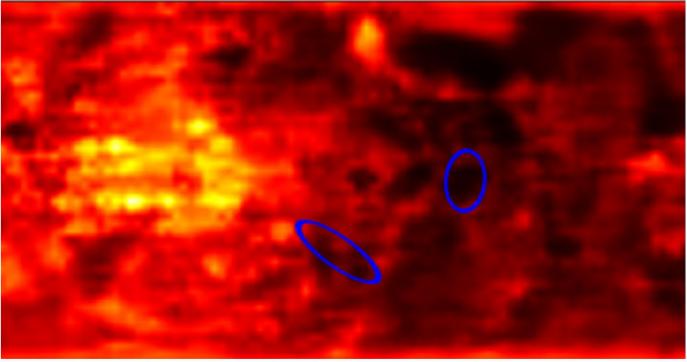

- demonstrate how the advanced infrastructure data can support safe, efficient operations of CAVs in mixed traffic
- support automated driving systems to safely and efficiently maneuver through complex environments (e.g., intersections, merge areas) from the perspectives of infrastructure-assisted perception (multi-sensor fusion to generate a holistic detailed view), localization (localizing the CAV via communication between vehicles and infrastructure), and behavior/trajectory planning (decision making using additional information)

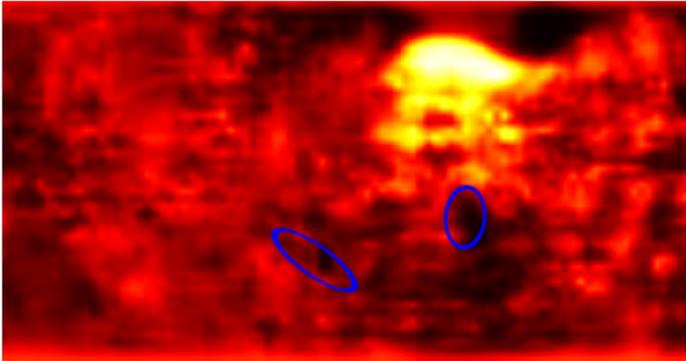

Infrastructure Rocks

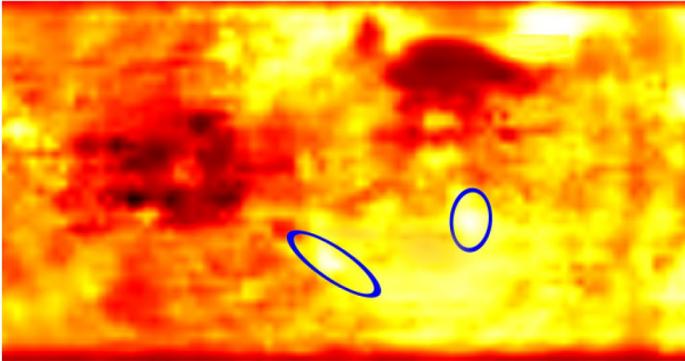

(a) LiDAR points (better zoom-in)

Some Thoughts

- Infrastructure extends beyond the physicality of roads, encompassing advanced technologies like Artificial Intelligence (AI), sensor systems, and high-performance computing that facilitate real-time decision making and robust vehicle-to-vehicle as well as vehicle-to-infrastructure communication.
- Smart infrastructure ready to deploy by utilizing many existing technologies that have already matured in autonomous driving, computer vision, and edge/cloud computing
- Deep digitalization of infrastructure will bring huge benefits by enabling diverse downstream management applications
 - Safety management
 - Automated/cooperative driving
 - Signal control
 - Curbside management
 - Asset management
 -
