

PV Module Reliability Workshop – Discussion Notes

Tuesday, February 24, 2015

Adhesion Measurement and Evaluation Session

- Q: What reliability problems do we expect to be solved in the coming years?
A: We already have solutions, it's whether those solutions will be consistently implemented (as the prices drop).
- Arizona State has developed a Risk Priority Number that evaluates the importance of the failure and degradation rates: *Determination of Dominant Failure Modes Using Combined Experimental and Statistical Methods and Selection of Best Method to Calculate Degradation Rates*, by Sanjay Shrestha, <http://repository.asu.edu/items/26838>.
