## c. Abstract:

The survey universe was comprised of households with telephones in Spokane and Kootenai Counties. The household travel survey was conducted using standard travel survey methods and computer-aided telephone interviewing (CATI) technology. It entailed the collection of activity and travel information for all household members regardless of age during a specific 24-hour period. The survey relied on the willingness of study area residents to (1) provide demographic information about the household, its members and its vehicles in a recruitment stage and (2) record all travel in a log for a specific 24-hour period in a retrieval stage. No incentives were provided to respondents, although an extensive public information campaign was executed by SRTC at the start of the project to emphasize the importance of and benefits from participating.
